REGIONAL AIR QUALITY EMISSIONS ASSESSMENT OZONE NAAQS

for the Connecticut portion of the New York-Northern New-Jersey-Long Island Ozone Nonattainment Area and the Greater Connecticut Ozone Nonattainment Area May 2017

The Clean Air Act Amendments (CAAA) of 1990 and the federal transportation regulations and legislation recognized the major contributions of transportation sources to the overall air quality problem evidenced throughout the country. To effectuate a reduction in transportation-related emissions and a corresponding improvement in air quality, areas designated as non-attainment or maintenance for a criterion pollutant were required to demonstrate that their transportation plans, programs and projects contributed to the attainment of National Ambient Air Quality Standards (NAAQS) and would not cause a new violation or delay attainment of the NAAQS. This process is referred to as Air Quality Conformity.

Connecticut is divided into two non-attainment area for the 8-hour ozone *NAAQS*, both are classified as "Moderate" non-attainment areas. Fairfield, New Haven and Middlesex counties are included as part of the New York-Northern New Jersey-Long Island (NY-NJ-CT) non-attainment area. The remainder of the state is designated as the Greater Connecticut non-attainment area.

In June, 2004, the EPA finalized the 8-hour conformity for Ozone non-attainment areas and the designated the Connecticut portion of the New York-Northern New Jersey-Long Island non-attainment area as a "moderate" non-attainment areas for the 8-hour Ozone standard. Subsequent decisions by the EPA and revisions to the approach for classifying non-attainment areas re-designated both of Connecticut's non-attainment areas as a "marginal" non-attainment areas with an attainment date of December 31, 2015. Based on 2012-2014 air quality data, the EPA determined that Connecticut's non-attainment areas did not attain ozone standards by July20, 2015. Both the Greater Connecticut and the New York-New Jersey-Long Island areas were reclassified as "Moderate," effective June 3, 2016. The new attainment date for these two areas is July 20, 2018.

The Connecticut Department of Transportation is responsible for conducting the air quality emissions assessments for the metropolitan planning organizations in Connecticut. The CTDOT uses the statewide travel demand model to estimate vehicle miles of travel for various classes of highways and during various time periods. The future transportation network includes all planned improvement projects and is based on the complete implementation of the transportation improvement program (TIP) and the long range transportation plans.

The MOVES2014a emissions model is used to calculate emissions from transportation travel. The 8-hour budgets were developed jointly by CTDOT and CTDEEP. The budgets were found to be adequate by EPA and can be used in comparing future transportation-related emission to determine conformity.

The conformity test requires the emissions from the future transportation system to be less than the EPA-approved budgets for all analysis years. The emissions analyses were conducted for the following years:

- 2018 New attainment year and near term analysis year
- 2025 Interim modeling year
- 2035 Interim modeling year
- 2040 Long range transportation plan horizon year

The results of the quantitative emissions analysis conducted by CTDOT are shown in the following tables and the analysis year trends are depicted in the charts following the tables.

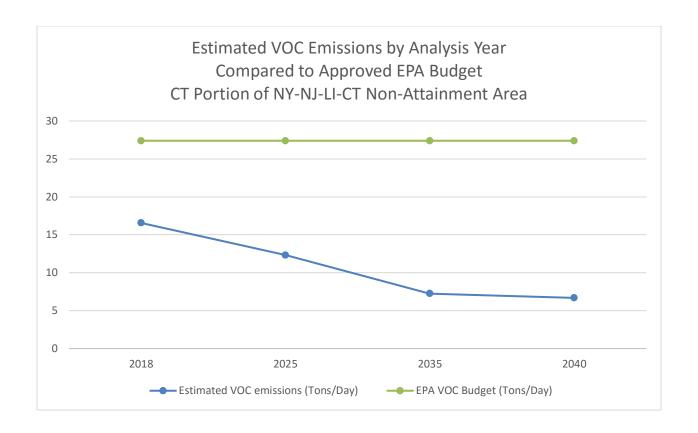

CENTRAL NAUGATUCK VALLEY PLANNING REGION 2015-2040 LONG RANGE TRANSPORTATION PLAN REGION EMISSIONS ANALYSIS RESULTS

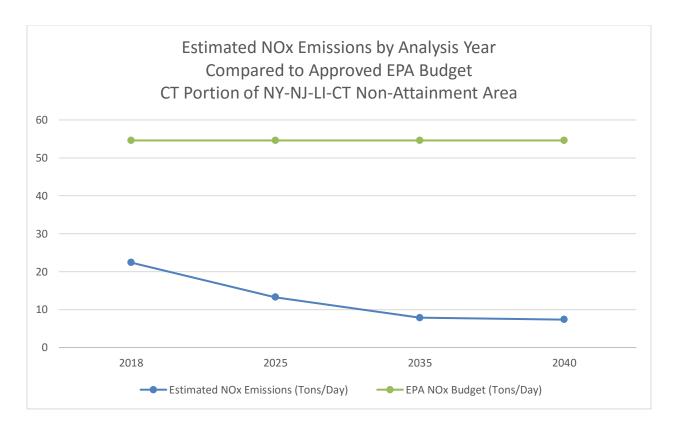

8-Hour Ozone NAAQS

Connecticut portion of the New York-Northern New Jersey-Long Island, NY-NJ-CT Ozone Nonattainment Area

	VOC	Emission An	alysis	NO _x Emission Analysis		
Analysis Year	Action	SIP Budget	Difference	Action	SIP Budget	Difference
2018 Emissions	16.56	27.40	-10.84	22.39	54.60	-32.21
2025 Emissions	12.33	27.40	-15.07	13.26	54.60	-41.34
2035 Emissions	7.26	27.40	-20.14	7.86	54.60	-46.74
2040 Emissions	6.68	27.40	-20.72	7.35	54.60	-47.25

- 1. A small reduction in VMT and emissions in the Greater Connecticut area will occur from the ECO program in the Connecticut portion of the NY-NJ-LI area due to travel between the areas.
- 2. VOC & NOx emissions are in tons per summer day and are calculated using Connecticut's vehicle mix.
- 3. HMPS 14 Functional Class system used.
- 4. National Low Emission Vehicle (NLEV) program included in 2008 and future years.
- 5. Eight Hour Ozone emission budgets effective June 27, 2008.
- 6. Series 31C with 20 iterations equilibrium assignment.

CENTRAL NAUGATUCK VALLEY PLANNING REGION 2015-2040 LONG RANGE TRANSPORTATION PLAN REGION EMISSIONS ANALYSIS RESULTS

8-Hour Ozone NAAQS

Greater Connecticut Non-Attainment Area

	VOC Emission Analysis			NO _x Emission Analysis		
Analysis Year	Action	SIP Budget	Difference	Action	SIP Budget	Difference
2018 Emissions	15.07	26.30	-11.23	19.74	49.20	-29.46
2025 Emissions	11.38	26.30	-14.92	11.86	49.20	-37.34
2035 Emissions	6.65	26.30	-19.65	6.91	49.20	-42.29
2040 Emissions	6.15	26.30	-20.15	6.48	49.20	-42.72

- 1. A small reduction in VMT and emissions in the Greater Connecticut area will occur from the ECO program in the Connecticut portion of the NY-NJ-LI area due to travel between the areas.
- 2. VOC & NOx emissions are in tons per summer day and are calculated using Connecticut's vehicle mix.
- 3. HMPS 14 Functional Class system used.
