Data Disclaimer

Several tables and figures in this report compare data from the 2013-2017 American Community Survey (ACS) five-year estimates to the 2000 Census. Beginning in 2005, the ACS replaced the long-form census as the source for detailed socioeconomic and housing data. The first complete ACS data set covered the years 2005-2009. The 2013-2017 ACS is a five-year estimate where a small percentage of all households are sampled each year. ACS estimates represent an average over the course of five years and are not equivalent to the 100 percent count data from the 2010 census. The ACS five-year estimates are not optimal for analyzing year to year trends because four of the five years of samples are reused in the next year's estimates. One-year and three-year ACS data are only available for larger municipalities.

The ACS surveys approximately 3 million households per year (roughly 2.5% of households) and aggregates the data on multi-year intervals. The long-form 2000 Census was given to approximately 16% of households. Both data sets used samples to calculate estimates for the entire population. The differences in methodology between the long-form 2000 Census and the 2013-2017 ACS make their comparisons difficult. However, because of the lack of related data sets, they were compared in several tables and maps. Readers should take note that these comparisons can help show general trends, but may be inaccurate in providing specific numbers.

1. Introduction

The following chapters present demographic, economic, and housing data for the Naugatuck Valley Region, a 19-town region in West Central Connecticut. Data comes from a variety of sources including the 2010 Decennial Census, the 2013-2017 American Community Survey (ACS), the Connecticut Department of Labor (DOL), and the Connecticut Department of Economic and Community Development (DECD).

Summary of Findings

This report examines past trends and provides an outlook for the future. The region's economic, housing, and population trends have been on the upswing since the 2007-2009 Great Recession.

The Naugatuck Valley has long benefitted from strong local and regional leadership, effective economic development organizations and a well-trained workforce. As of 2017, the unemployment rate has moved down to 4.7 %. Other positive factors noted in this report include the fact that despite volatility in the housing market over the last few years, the region remains more affordable than the state as a whole. Also, it has maintained steady population growth of about 4.6%, with all municipalities becoming more ethnically diverse during the past 18 years.

In addition, it is important to note that the region is positioning itself well for years ahead. Local officials recognize that creating the conditions for sustainable, transit

-dependent communities is key to stimulating greater private investment. Such transportation improvements and creating sustainable growth around transit, as well as a Naugatuck River area revitalization, are in the works. The 27 miles of the Waterbury Branch Rail Line is a priority under the state's 30-year "Let's Go CT!" transportation initiative and key changes are underway to increase capacity and service offerings. These projects are designed to bring numerous quality of life and future economic development benefits.

In the near future, the region will be shaped by the retirement of the baby boomers. A surge in the elderly population will require a shift in the provision of services and access to affordable housing to meet this demand.

Figure 1a.
This report will examine the relationship between population, economic, and housing trends

Figure 1b.
Composition of the
Naugatuck Valley
Region

Methodology is based on Data Haven's Community Well Being Index

Composition of the Region

While overall regional trends are informative, they fail to account for the differences that exist between municipalities, or even neighborhoods within a municipality. Each scale of analysis tells a different story, and this report will show data in a variety of scales in order to provide as complete an overview as possible.

This report presents data at regional, subregional, municipal, and neighborhood scales. In order to highlight key trends among similar municipalities, a three-level subregional classification was developed (Figure 1b). Municipalities

were classified as urban core, inner ring, or outer ring based on current and historic population, economic, and housing trends. Table 1a below highlights some of the differences that exist between the urban core, inner ring, and outer ring communities.

To supplement the regional and subregional scales, tables in the text and appendices present data for each municipality. Where applicable, neighborhood (block-group) level maps were created to highlight the differences that exist from neighborhood to neighborhood.

Median Home Value 2017	\$243,680	\$168,443	\$287,168	\$314,141

Urban Core

During the 19th century, the urban core emerged as a leading manufacturing center for brass, copper, clocks, watches, and rubber products. The urban core has high levels of racial and income diversity, high population density, good access to public transit, and plentiful affordable housing. The character of the urban core varies significantly from neighborhood to neighborhood. Most of the region's major institutions, such as hospitals and higher education, call the urban core home.

Inner Ring

Inner ring communities contain a mix of urban and suburban characteristics. Smaller manufacturing centers such as Oakville, Terryville, and Shelton emerged in the 19th century, forming the historic cores of the inner ring municipalities. In the post World War II years, these communities became more suburban in character as urban core residents and young families moved in. Today, the population is highly educated and moderately diverse. In the last decade, the inner ring has seen job growth as companies leave the urban core to be closer to their workforce.

Outer Ring

The traditionally rural outer ring has become more suburban in character over the last two decades. From 2000 to 2017, the outer ring population grew at 12.3%, far faster than the region, state, and nation. These towns have the lowest population densities, the highest incomes, and the highest proportion of elderly residents. With few local jobs, most outer ring residents commute to jobs in neighboring towns and cities.

Main Street, Ansonia

Urban Core

The urban core is comprised of the region's historic manufacturing centers. They have the highest population density and most diverse populations.

Congregational Church, Cheshire

Inner Ring

Inner ring communities contain a mix of urban and suburban characteristics.

Tranquility Farm, Middlebury

Outer Ring

Traditionally rural outer ring communities have seen explosive population growth over the last two decades.

2. Population and Demographic Trends

This chapter summarizes regional demographic trends such as population change, race and ethnicity, age, household structure, education, and income.

The major population and demographic trends shaping the region are:

- Population growth in the outer ring outpaced the rest of the region through 2010 but has since slowed and shifted to the inner ring.
- All municipalities are becoming more racially and ethnically diverse.
- In the next ten years, the region will see a large increase in retirees and a decline in school-aged population.
- Non-traditional households (non-married couples) are becoming more common.
- There is a large education and income gap between the urban core and surrounding municipalities.

Population Growth

From 2000 to 2017, the region saw a modest 4.4% growth rate, adding 18,960 new residents. This was a faster growth rate than the 1990s, but much slower than the 1980s. About 60% of the population growth was due to natural increase (births minus deaths), while 40% was due to in-migration from outside the region. Demand for new single family homes in the early 2000s led to explosive growth in outer

ring municipalities, which grew 12.3% between 2000 and 2017. The remainder of the region grew at a slower rate, with a 4.7% increase in the inner ring and a 2.4% increase in the urban core.

Since 2010, population growth has stagnated as a result of the 2007 to 2009 recession. From 2007 to 2016, the number of births dropped by 14.4%. Many families have delayed having children due to economic uncertainty and rising student loan debt. The drop in new home construction since 2008 has prevented new residents from moving to the region, particularly in the urban core.

Figure 2a.

Population Growth in the Naugatuck Valley, by Location: 2000 to 2017

Immigration and Migration

While birth rates have fallen, immigration and migration have allowed the region's population to continue to grow at a modest rate. Just over 11% of the region's population is foreign born, with the largest groups hailing from Portugal, Poland, Italy, the Dominican Republic, and Jamaica. The region is also home to a large migrant population from Puerto Rico.

From 2000 to 2016, the region had a net gain of 3,983 residents through in-migration. While the outer ring experienced a natural decrease in population (more deaths than births), they added 10,963 residents through in-migration (people moving into the region). At the other end of the spectrum, the urban core had a large natural increase (more births than deaths) offset by a loss of 12,273 residents through out-migration. The inner ring saw a small natural increase and gained 5,293 residents through in-migration.

Population Projections

Population projections from the Connecticut State Data Center indicate that up to 2025, the region's population will continue to grow, but at a much slower rate than in the past. From 2025 to 2040, the region is projected to shrink by 1.2%, losing approximately 5,355 residents.

The urban core is projected to grow at the fastest rate, adding 7,856 residents between 2015 and 2040, a 3.3% increase. Waterbury, which has a much higher birth rate than the rest of the region, is projected to grow by 7.3%.

New home construction and in-migration will slow and limit population growth in the outer ring. Middlebury and Oxford are projected to be the two fastest-growing municipalities in the region.

In the inner ring, shrinking household size and a decrease in the population under 15 will limit growth. The population in the inner ring is expected to decline by 9.7% between 2015 and 2040. Communities such as Cheshire and Shelton are close to being "built out" and have little developable land to support new housing units.

While population projections are useful, they are unable to predict changes in the housing market and economy. The housing market will dictate where growth will occur, particularly for the inner and outer ring. Similarly, birth rates, migration, and immigration are closely tied to the economy. A growing economy generally sees higher population growth than a stagnant economy.

Figure 2b.
Projected Population Growth in the Naugatuck Valley, by Location: 2015 to 2040

Sources: Connecticut State Data Center, Population Projections by Municipality: 2015–2040

Race and Ethnicity

Immigration, migration, and higher birth rates among minority groups have made the region's population more diverse than ever before. As of 2017, 127,083 residents were of a minority race or ethnicity, making up 28.4% of the total. This is an increase from 2000, when just 16.9% of the population belonged to a minority group. From 2000 to 2017, the urban core experienced "white flight" as their non-Hispanic white populations declined by over 35,600. This coincided with rapid growth among Hispanics, African Americans, and Asians.

Waterbury is a minority-majority city, with 61.5% of its population belonging to a minority racial or ethnic group. Ansonia, Derby, Naugatuck, Seymour, and Bristol have the next highest minority populations. Outside of the urban core, less than 14% of the population belongs to a minority group, although this trend is changing. Between 2000 and 2017, inner ring and outer ring communities saw their minority

populations grow at rates of 91.5% and 172% respectively, exceeding the urban core growth rate of 67.6%.

Hispanics are the largest and fastest growing minority group in the region with a population of 73,007, a 108% increase from 2000. Hispanics now make up 16.3% of the population. A majority of Hispanics who live in the region are of Puerto Rican heritage, including nearly 25,000 who live in Waterbury. There was also sizable growth among African Americans, who make up 7.1% of the population. Asians, the second fastest growing minority group through 2000 to 2017 (87.1%), are more likely to live in the suburbs than the urban core. Figure 2c compares the racial and ethnic composition of the Naugatuck Valley in 2000 and 2017.

Figure 2c.

"Other" includes American Indian/Alaska Natives, Pacific Islanders, Some Other Race, and Multiracial persons.

Black, Asian, Other, and White populations only include non-Hispanic persons.

Source: U.S. Census Bureau, 2000 U.S. Census, American Community Survey 5-Year Estimates: 2012-2016 DP5

Age

The region's population is aging. In 1990, the median age was 34.3. By 2000 it increased to 37.6, and by 2017 reached 41.5 years old. The urban core has the youngest median age at 37.4 years old while the outer ring is the oldest at 46.7 years old. From 2000 to 2017, the number of residents over the age of 65 increased by 17.2%, with the fastest growth in the inner ring (34.8%) and outer ring (43.6%). The urban core saw a decrease in elderly residents (-1.3%).

The aging trend will accelerate as baby boomers reach retirement age. The population over the age of 65 is projected to balloon from 70,934 in 2015 to over 89,451 by 2040.

The working-aged (age 15 to 64) population is expected to stay stable up to 2020 and then decline slightly through 2040. As the baby boomers age into retirement, millennials (born between

1980 and 2000) will make up a greater portion of the region's workforce.

As of 2015, there are 79,727 children under the age of 15, making up 17.7% of the total. This age group is expected to decline to 75,456 by 2040. Inner ring and outer ring communities are projected to see their population under age 15 decrease by over 11.4%.

The changing age structure of the region will shift the financial burdens of municipalities. Budgets will shift away from education and youth services towards elderly services such as health care, transportation, and recreation. This is particularly true in inner and outer ring communities, where a dramatic increase in elderly population will correspond with a decrease in school-aged population. Greater financial burdens will be placed on the working aged population, who will have to support the growing number of retirees.

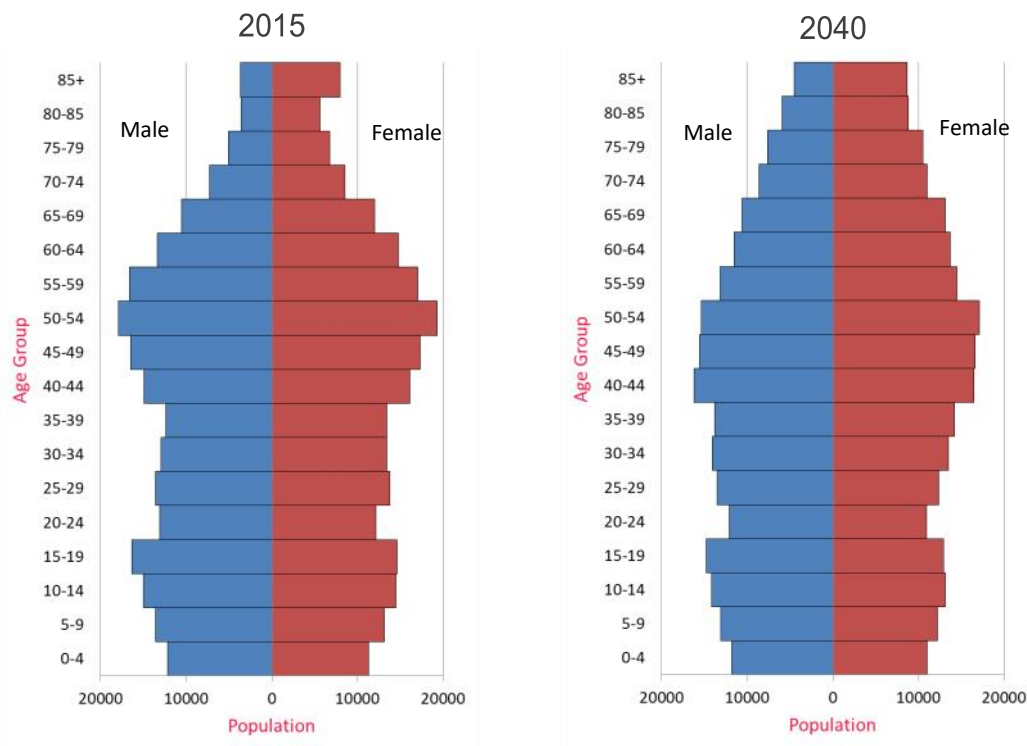

Figure 2d.

Valley, 2015
and 2040

Source: Connecticut State Data Center, Population Projections: 2015 –2030

Household and Family Structure

Household arrangements have changed as the average age of marriage increases, family sizes decrease, and life expectancy increases. For the first time in history, less than half of the region's households are made up of married couples. Persons living alone, cohabitating couples, married couples without children, and single parent households are becoming more prevalent.

Less than half of married couples have children age 18 and under. "Empty nesters" are becoming more common as the millennial generation ages, and many young couples have delayed having children in the last few years due to economic uncertainty.

Household structure in the urban core differs significantly from the inner and outer ring communities. Just 38.6% of urban core households are married couples compared to 57.0% in the inner ring and 59.5% in the outer ring. A disproportionate number of single-parent households are found in the urban core.

Education

As of 2017, 30.3% of the region's adults age 25 and over have a Bachelor's degree or higher. This compares to 30.9% of adults nationwide, and 38.4% statewide. There is a large discrepancy in educational attainment between the urban core and the remainder of the region. In the urban core, just 21.2% of the population age 25 and older has a Bachelor's degree or higher, compared to 38.3% in the inner ring, and 41.5% in the outer ring.

Since 2000, educational attainment has improved across all municipalities. The number of residents with at least a Bachelor's degree increased by 41.2%, with the fastest increase occurring in the outer ring. During the same period, the number of residents without a high school diploma dropped by over 35.7%.

Education is strongly correlated with income. Persons with a college degree have much higher incomes than high school graduates. Municipalities with a higher proportion of college graduates have higher incomes than less educated municipalities. Figure 2e below illustrates the relationship between education and income.

Figure 2e.
Educational
Attainment and
Household In-
come, by Loca-
tion 2017

Income and Poverty

There is a large income gap between the urban core and remainder of the region. From 2012 to 2017 estimates, median household income in the urban core was \$51,838 compared to \$86,462 in the inner ring and \$93,192 in the outer ring. Over a quarter of households in the urban core are low income (making less than \$25,000 per year) compared to 11.1% in the inner ring and 11.7% in the outer ring. On the opposite end of the income spectrum, over 40% of households in the inner and outer ring are high income (making \$100,000 or more per year) compared to less than 21% in the urban core.

The Great Recession negatively impacted household and family income throughout the region. In addition, the growing number of elderly persons puts additional financial strain on households (retirees have less income than working-aged persons). Since 1999, median household income declined in 17 out of 19 municipalities. The highest drops in household income

occurred in the urban core towns of Ansonia, Derby, and Naugatuck. Woodbury also experienced a large drop. These three towns have a high percentage of single parent households.

The number of people in poverty increased by 59.1% from 2000 to 2017. In 2000, there were 31,412 persons living in poverty (7.5% of total). By 2017, it had increased to 50,001 (11.4% of total). Poverty increased at a moderate rate in the inner and outer ring municipalities and highest in the urban core. Waterbury, which has a poverty rate of 24.3%, is home to almost half of the region's impoverished.

Child poverty is a prevalent issue in the urban core, where 25.8% of children live below the poverty line. Ansonia, Derby and Waterbury have child poverty rates exceeding 19%.

Figure 2f.
Percentage of Households that are Low Income and High Income, by Location, 2013 - 2017

3. Economic Trends

The Naugatuck Valley economy was adversely impacted by the 2007 to 2009 Great Recession but is making gains towards its recovery to pre-recession levels. The major economic trends shaping the region are:

- Unemployment disproportionately affects young workers under the age of 25.
- As of 2018, the region has regained 94% of the number of jobs lost during the recession.
- Jobs are suburbanizing. During the last ten years the inner ring saw job growth while the urban core lost jobs.
- Over half of Naugatuck Valley residents commute to jobs outside the region.

Labor Force

The labor force is made up of Naugatuck Valley residents over the age of 16 who are either employed, or are unemployed and looking for work. As of 2018, the region's labor force was 235,788, of which 224,794 were employed and 10,994 were unemployed.

From 2010 to 2013 the state and region experienced a labor force contraction, meaning that there were fewer residents who were employed or looking for work. The labor force contrac-

tion can be attributed to stagnant job growth, unemployed workers dropping out of the labor force, and a growing number of residents hitting retirement age. In 2014 the labor force grew for the first time since 2009 and has remained steady. People who had difficulty finding work during the last few years are reentering the labor force as the job market improves.

Employment

As of 2018 there were 224,794 employed residents living in the region. This is only 3,749 more than the 2007 number when there were 221,045 employed residents. The number of employed residents decreased every year from 2008 to 2013 but has continued to rebound from 2014 to 2018.

Population projections indicate that a significant number of baby boomers are nearing retirement age. The number of working aged residents is projected to remain stable up to 2020 and decline thereafter as the last of the baby boomers retire. Attracting and retaining young workers will be necessary to replace the growing number of retirees.

Unemployment

From 2007 to 2010 the region saw the number of unemployed residents more than double from 11,954 to 24,656. The jump in unemployment was caused by both job losses and labor force growth. Unemployment has decreased each year since 2010. As of 2018, it stands at 10,994, or 4.7% of the labor force. The labor force contraction (unemployed persons that have stopped looking for work) is responsible for some of the drop in unemployment. Despite improvements over the last three years, the unemployment rate remains slightly above state and national averages. Figure 3a summarizes labor force, employment, and unemployment trends over the last 23 years.

Unemployment trends vary by location and age. As of 2018, unemployment is highest in the urban core communities of Waterbury (6.6%), Ansonia (5.7%),

and Derby (5.2%), and lowest in the inner ring community of Cheshire (3.0%) and the outer ring communities of Wolcott (3.0%), Oxford (3.4%), Woodbury (3.4%), and Middlebury (3.4%).

Due to the collapse of the stock market from 2007 to 2009, many older workers have continued to work into retirement age. This trend, combined with the lack of new job creation, has led to a disproportionately high unemployment rate among young people. The unemployment rate for residents under the age of 25 is 16.1% compared to 6.7% for middle aged workers (age 25-44) and 5.6% for older workers (age 45 and older)*

Figure 3a.
Labor Force,
Employment and
Unemployment in the
Naugatuck Valley:
1994-2018

Jobs

During the recession, the region experienced sharper job losses than the state and nation as a whole. From 2007 to 2011, 12,337 jobs were lost, a decline of 7.6%. The manufacturing, finance and insurance, and construction sectors experienced the sharpest job losses. Some sectors, such as health care and social assistance, and educational services, added jobs during the recession. These sectors have traditionally been “recession-proof.”

Since 2011 the economy has improved, adding over 11,610 jobs. As of 2018, the region has gained back 94% of the number of jobs that were lost during the recession. Comparatively, the state has gained back 154% of the jobs that were lost during the recession.

As of 2018 there are 161,640 jobs in the region. Despite job losses during the last ten years, Waterbury remains the job center of the region followed by Shelton, Bristol, and Cheshire.

As the population shifts to the suburbs, many employers have followed in order to be closer to their workforce. From 2004 to 2018, the urban core lost over 2,600 jobs while the inner ring

gained over 6,300 jobs, mostly in Shelton, and Cheshire. Bristol was the only urban core municipality to gain jobs (1,060). Outer ring towns with good highway access (such as Oxford and Middlebury) also saw job growth.

Over the last half century, the region has shifted from a manufacturing-oriented economy to a service-oriented one. Health care and social assistance is now the largest job sector followed by manufacturing (12.9%) and government (12.3%) which includes public school teachers. While much less prominent than in the past, manufacturing remains the second largest sector of the region’s economy, with over 20,000 jobs. A majority of manufacturing jobs are now located outside of the urban core.

Employment projections from the Connecticut Department of Labor for the Northwest Region of the State indicate that the health care and social assistance sector will drive job creation between 2016 and 2026, largely due to increased demand for health care by the baby boomers. Other sectors projected to add jobs up to 2026 are administrative and support and waste

Figure 3b.
ESPN in Bristol is the largest employer in the region, with 4,200 workers

management and remediation services, and construction, although the latter is largely dependent on the housing market.

Commuting

There is a large mismatch between the number of employed residents living in the region and the number of jobs in the region. There are enough jobs to employ just 72% of working residents. The result is a net export of over 63,000 workers each day to other regions, with many commuting to Hartford, New Haven, Bridgeport, Danbury, and lower Fairfield County.

Cheshire, Middlebury and Shelton are the only municipalities in the region that have more jobs than employed residents. The remaining municipalities have more employed residents than jobs and are net exporters of job commuters.

As of 2017, when the most recent commuting data was available, just 39% of employed Naugatuck Valley residents worked in the region. The remaining 61% commute to jobs outside of the region. Waterbury is the most popular commuting destination followed by

Bristol, Cheshire and Shelton. Outside of the region, the most popular destinations are Hartford, New Haven, Stratford and Danbury. Similarly, nearly half of the people who work in the Naugatuck Valley live outside of the region.

Wages

The average wage of workers in the region is \$56,460 which is above the national average of \$51,960, but below the state average of \$67,744. Since 2007, the region has seen wages decrease slightly (3.2%) compared to the state, which declined by 1.0%.

Average wages vary significantly from sector to sector. The Management of Companies and Enterprises has an average wage of over \$144,656, while the Accommodation and Food Services Sector has an average wage of just \$19,601. Table 3a below shows the highest and lowest wage sectors in the region.

Top 5 Highest Paying Sectors

Sector	Average Wage
Management of Companies and Enterprises	\$144,656
Information	\$128,082
Utilities	\$104,154
Finance and Insurance	\$98,661
Professional, Scientific, & Technical Services	\$88,688

Bottom 5 Lowest Paying Sectors

Sector	Average Wage
Accommodation and Food Services	\$19,601
Arts, Entertainment, and Recreation	\$23,477
Other Services	\$26,213
Retail Trade	\$31,493
Administrative & Waste Management	\$35,464

Table 3a.
Highest and Lowest
Paying Sectors of
the Naugatuck Valley
Economy: 2018

4. Housing Trends

In recent years, the housing market has been shaped by the Great Recession and preceding housing bubble. The major housing trends shaping the region are:

- Multi family homes account for 30.6% of the total new construction in the region since 2011.
- Since peaking in 2005, new construction decreased 68% by 2017.
- Homes in the region are more affordable than the state as a whole.
- Most of the affordable housing in the region is found in the urban core.

New Construction

During the early 2000s the region experienced a building boom. New con-

struction peaked from 2002 to 2005 when over 5,000 housing units were built. The vast majority (85%) of new homes were single-family homes. Shelton and Oxford led the region in new construction.

In 2005 new home construction totaled 1,676 units, but fell to just 298 units in 2011 as the national housing bubble burst. New construction has remained well below its historic levels since then. The multi family market picked up pace in 2012 and 2013 due to apartment and condominium construction in Shelton and Bristol. In 2015 the inner ring added 224 multi family units with 152 in Shelton, 72 in Seymour, and 11 in Thomaston. In 2016 the multi family housing market stalled with only 17 units built in the region. Construction of new single family homes has remained somewhat stagnant.

Due to shrinking household sizes, housing has grown at a faster rate than the number of households.

Figure 4a.
Newly Constructed
Housing Units in the
Naugatuck Valley,
by Unit Size: 2006
to 2017

Housing Stock

As of 2017, the region has 186,885 housing units. Single-family homes comprise 64.3% of units. Outer ring communities such as Oxford, Bethlehem, and Middlebury are made up almost entirely of single-family homes. By contrast, a vast majority of the region's multi-family housing units are found in the urban core. However, in the last decade, a majority of the new multi-family units were built in the inner ring.

Homes in the inner and outer ring are larger and newer than their urban core counterparts. The median year of construction for the region is 1965. The urban core has the oldest housing stock (1962) followed by the inner ring (1969) and outer ring (1975). Suburban homes are also larger. Over 60% of housing units in the inner and outer rings have six or more rooms compared to 40.5% in the urban core.

Home Ownership

As of 2017, 68% of households in the region live in an owner-occupied home. This is slightly higher than the 66.6% homeownership rate statewide. Outside the urban core, over 80% of households live in owner-occupied homes. Three-quarters of all rental units are located in the urban core.

Homeownership trends also vary by type of housing unit and income. Single family units are much more likely to be owner occupied (90.0%) than multi-family units (30.1%). High income households are more likely to own a home than low income households. Less than 32.1% of households that make under \$25,000 live in an owner-occupied unit compared to approximately 84% for households that make over \$100,000.

West End neighborhood, Bristol

Urban Core

Originally built to house factory workers, two and three family homes are commonly found throughout the urban core.

Katharine Matthies House, Seymour

Inner Ring

Containing a mix of both urban and suburban characteristics, the inner ring offers a variety of housing options.

Wolcott Green Historic District, Wolcott

Outer Ring

Since 1990, much of the new construction in the region has occurred in the outer ring. Single-family homes on large lots have been the predominant form of development.

Home Values

In keeping with national and state trends, the region saw rapid home value appreciation in the early 2000s. From 2003 to 2007, the equalized net grand list, or ENGL, (the total market value of all properties in the region) increased by 39.0%, or nearly \$18 billion. While the bulk of the increase was due to overvalued real estate, some of the increase was due to new construction. After peaking in 2007, the housing market began its subsequent collapse. From 2007 to 2017, the ENGL dropped by -39.0%, a loss of more than \$16 billion. The urban core saw the highest ENGL growth from 2003 to 2007 (41.6%) followed by the sharpest decline from 2007 to 2017 (-30.8%). Figure 4b shows changes in inflation adjusted ENGL from 2002 to 2017.

The drop in property values and municipal grand list value has led to fiscal challenges for municipalities, who have been forced to either raise property tax rates, cut services, or both. In addition, many homeowners have negative equity (their home is worth less than

their mortgage) leading to increases in foreclosure and home vacancy.

Despite volatility in the housing market over the last few years, the region remains more affordable than the state as a whole. The median home value for owner occupied units in the region is \$243,680, compared to \$273,100 statewide. Eleven of the 19 municipalities in the region are more affordable than the statewide median. Homes are most affordable in the urban core (\$168,443) while the inner (\$287,168) and outer (\$314,141) rings have the most expensive homes.

Housing Costs

Monthly homeowner costs and monthly rent also provide insight into the region's affordability.

Median monthly homeowner costs range from a low of \$1,307 in Waterbury to \$2,033 in Oxford. Homeowners with a mortgage pay more than twice as much per month as homeowners without a mortgage. From 2000 to 2017, median monthly homeowner costs for homes with a mortgage have risen as much as 19.5%. Non-mortgaged homeowner costs increased at a faster rate than mortgage costs, suggesting that fuel prices, electricity rates, taxes, and insurance are increasing.

Renters pay less per month than homeowners. Median gross rents (lease amount plus utilities) range from a low of \$924 in Waterbury to \$1,494 in Southbury. Rent has not increased as fast as homeowner costs. In four outer ring towns inflation-adjusted gross rents actually decreased from 2000 to 2017.

Affordable Housing

The U.S. Census Bureau uses 30% of household income as a standard for measuring housing affordability. In order to be considered affordable, homeowners should pay 30% or less of their income towards housing. As of 2017, 35.6% of households pay 30% or more of their income towards housing. Renters (48.8%) are more likely to pay 30% or more of their income towards housing than homeowners (29.3%). More than half of urban core renters pay 30% or more of their income for housing.

Low income households may qualify for publicly assisted housing programs such as Section 8 vouchers, deed re-

strictions, and Connecticut Housing Finance Authority (CHFA) or Farmer's Home Administration (FmHA) mortgages. Over 83% of publicly assisted housing units are found in the urban core, including more than half in the City of Waterbury.

Municipalities that have less than 10% affordable housing are subject to Connecticut General Statutes (CGS) Section 8-30g, which limits the conditions under which towns may deny applications for such developments. Ansonia (15.2%), Bristol (13.4%), Derby (11.5%), and Waterbury (20.9%) are the only municipalities that meet the 10% affordable housing threshold. The remaining municipalities have less than 10% affordable housing and are subject to CGS Section 8-30g.

Figure D2.
Labor Market Areas in the Naugatuck Valley Region: 2019

** Bethlehem and Woodbury were added to the Waterbury LMA in 2015. Each mid-decade, the U.S. Office of Management and Budget (OMB) updates statistical area definitions (geographical composition) or labor market areas based on population and commuter patterns from the most recent decennial Census (2010).*
