Executive Summary

In support of the United States Environmental Protection Agency Region 1 Targeted Brownfields Assessment Program, the United States Department of Transportation John A. Volpe National Transportation System Center (Volpe) has completed a Phase I Environmental Site Assessment (ESA) for the property known as the Kinneytown Dam (the Site), located along the Naugatuck River in Seymour and Ansonia, CT.

The Site consists of three land parcels totaling 170.89 acres and is owned by Kinneytown Hydro Company Inc. The Site consists of two dams, two former power plants, and a gate house. The Naugatuck River, a canal, and Coe Pond intersect the Site. A Metro-North rail line runs adjacent to the Site, along the river. The dam and associated site buildings are planned for demolition.

The Kinneytown Dam was constructed in 1845 as a diversion dam for a downstream mill and later converted into a hydroelectric dam (Unit 1) with a canal that leads to Unit 2 and the canal dam downstream. Floods have twice destroyed the dam, once in 1910 and again in 1955, and it was twice rebuilt. The dam has not been used to generate electricity since Fall 2020.

An environmental database search was conducted for the Site and surrounding one-mile radius. All records located within a mile of the Site were reviewed. The largest potential impacts come from the Ansonia Copper and Brass Co., formerly known as the Anaconda American Brass Co. Founded in 1845 and located adjacent to and south of the Canal Reservoir Dam, potential releases from this location were unlikely to have traveled upgradient towards Coe Pond, however, it is unknown what type of historic operations may have impacted the vicinity of Coe Pond and the Canal Dam. There are several findings related to former automotive repair shops and presence of historic underground fuel storage tanks. Many of these locations are along the west bank of the Naugatuck River and Site property.

Interviews with Laura Wildman of Save the Sound provided actual knowledge of potential RECs on Site. Limited sediment sampling was performed in two locations within the Site impoundment north of the Dam structure in December 2022 and included the collection of five samples analyzed for herbicides, pesticides, polyaromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), semivolatile organics (SVOCs), volatile organics (VOCs), and metals. Laboratory analysis identified several detections exceeding CT Residential Direct Exposure Criteria for Soil Criteria, including PAHs, SVOCs, and VOCs. Additional visual findings included the presence of petroleum-like sheen and odors within the sediment. Historic records also document similar sediment sampling performed at other upstream dams along Naugatuck River and historic contamination found in sediments at other dam removal sites upstream.

Volpe representatives visited the Site on January 12, 2023, to conduct a site reconnaissance visit. They inspected the Site along with staff representatives from the Hydro Company, Naugatuck Valley Council of Government, and Save the Sound. The site visit included touring onsite dam structures, understanding general hydroelectric operations, and considerations of potential impacts from historic off-site receptors.

This Phase I assessment has revealed a recognized environmental condition in connection with the Site from potential sediment contamination resulting from historic releases of hazardous materials and/or petroleum products from upstream off-site receptors.

Volpe recommends that a site investigation be conducted to evaluate the presence or absence of hazardous materials and petroleum products in sediment north of the dam structure and within Coe Pond. Mechanical drilling is recommended to evaluate the presence or absence of these contaminants from within the vertical extent of sediment down to bedrock within the dam impoundments. Non-scope considerations include a recommendation to perform hazardous materials building inspections prior to the removal and demolition of on-site structures.

1.0 Introduction

In support of the United States Environmental Protection Agency (EPA) Region 1 Targeted Brownfields Assessment Program, the United States Department of Transportation John A. Volpe National Transportation System Center (Volpe) has completed a Phase I Environmental Site Assessment (ESA) for the property known as the Kinneytown Dam (the Site), located at in Seymour and Ansonia, CT.

This Phase I ESA was performed in accordance with ASTM E1527 – 13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

I.I Purpose

The purpose of a Phase I ESA is to identify any recognized environmental conditions (RECs) that may be present at the Site. Per ASTM, RECs are the presence – or likely presence – of hazardous substances or petroleum products at the Site due to a release - or likely release - to the environment; or are present under conditions that pose a material threat of a future release to the environment. A de minimis condition (i.e., one related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action) is not an REC.

I.2 Scope

As part of this Phase I ESA, Volpe completed a review of Site records including, but not limited to, federal, state, and local agency databases, historical maps, aerial photographs, and local directories. Additionally, Volpe conducted interviews with personnel familiar with Site and government officials. Volpe visited the Site on January 12, 2023, to perform reconnaissance activities including visual and physical observations of the Site and identification of site features, activities, uses, and conditions. The findings of these investigations were recorded and are documented in this report and its attachments.

2.0 Site Description

2.1 Site Location

The Site is an approximately 171-acre area located between Seymour, CT and Ansonia, CT, in New Haven County, Connecticut. The Site is comprised of three parcels:

- 677 South Main Street, Seymour CT, map-block-lot (MBL): 11-03-35-0, approximately 18 acres
- 769 Derby Avenue, Seymour, CT, MBL: 12-04-34-0, approximately 99 acres
- 0 Hotchkiss Terrace, Ansonia, CT, MBL: 036 0001 0003, approximately 54 acres

Kinneytown refers to a populated place located in the town of Seymour, CT. The site is immediately adjacent to the Naugatuck River and Metropolitan Transportation Authority (MTA) Metro-North railroad tracks. The Site location is presented in Appendix A, Figure 1.

2.2 Site Characteristics

Lavout

Kinneytown Dam is a Hydroelectric facility located in Seymour, CT on the Naugatuck River, currently owned by HydroLand, Inc. The facility was designed to produce electricity via turbines in two powerhouses. The Seymour powerhouse (powerhouse 1) is adjacent to the dam. The Ansonia powerhouse (powerhouse 2) is located approximately one mile south. A canal and reservoir (known today as Coe Pond) delivered water from powerhouse 1 to powerhouse 2. The Site consists of several areas:

- The Kinneytown Hydroelectric Dam powerhouse 1, which is located in Seymour, CT and has not produced power since 2020. It consists of an impoundment, spillway, sluicegate, large filtering grates, fish passage ladder, gatehouse (located on the opposite bank of the river across the impoundment), buried penstock, floating boat barrier, and the powerhouse which contains a turbine, transformer, and associated equipment.
- The Kinneytown Hydroelectric Dam powerhouse 2, which is sometimes referred to as the "old powerhouse" is located in Ansonia, CT and has not produced power since 2013. Powerhouse 2 consists of a catwalk, impoundment, spillway, and powerhouse which contains a turbine, transformer, and associated equipment. This building is in a state of disrepair.
- A manmade canal, which runs between the two dams to deliver water from powerhouse 1 to powerhouse 2. The gatehouse at dam 1 controls inflow (north to south) rate. There is a reservoir located along this canal to retain excess water. This reservoir is known today as Coe Pond. From Coe Pond, the canal continues to south to powerhouse 2.
- Coe Pond, a manmade reservoir formed by the canal between dam 1 and 2.

Structures

The Kinneytown Hydroelectric Dam consists of the following structures at the locations described above:

- Kinneytown Dam the newer dam located on the north end of the site on the Naugatuck River sometimes referred to as Unit 1. Accessed from the west side of the river. Structures at Unit 1:
 - Unit 1 Intake a sluice and gate to bring water into the turbine housed at the Unit 1 powerhouse
 - o Spillway a structure to direct overflow out of the Unit 1 impoundment and keep water moving downstream along the Naugatuck River
 - Fish Ladder a concrete structure designed to allow fish passage around the dam
 - Unit 1 Powerhouse an underground vault housing the Unit 1 turbine and associated equipment such as transformers, pumps, tanks, and regulators
 - Canal Gatehouse a brick building across the river from the Unit 1 powerhouse (on the west bank) housing controls for opening and closing the gate which allows water from the impoundment and canal to flow south towards Coe Pond and the Canal Dam (Unit 2)
- Canal Dam the older dam located on the south end of the site along a man-made canal which runs from the Canal Gatehouse at Unit 1 to Coe Pond and then to Unit 2. Structures at Unit 2:

- Unit 2 Intake a sluice and gate to bring water into the turbine housed at the Unit 2 powerhouse
- Unit 2 Powerhouse a brick building housing the Unit 2 turbine and associated equipment such as transformers, pumps, tanks, and regulators

The Kinneytown Dam is 28 feet high and 455 feet wide, with an estimated impoundment area of 72 acres at Unit 1. The Canal Reservoir Dam is 30 feet high and 60 feet wide, with an estimated impoundment area of 37 acres. Please see Appendix A, Figure 2 for the location of each structure. A site plan drawing of the facility can be found in Appendix A, Figure 3.

Utilities

Transmission lines and transformers exist at the site as the site formerly produced electricity for distribution. Power is currently active at the site. Two underground sewer lines transect the upper dam impoundment, from east to west. There are no additional known utilities connected to the site.

Zoning

The Site consists of three parcels described in the sections above, each zoned differently. According to parcel data shared by NVCOG, 677 South Main Street is zoned for residences. 769 Derby Avenue has limited industrial zoning and 0 Hotchkiss Terrace has heavy industrial zoning.

2.3 Present Ownership and Use

The site is currently owned by Hydroland, Inc. and is not in use. All structures listed above are either abandoned or otherwise not in use. The fish ladder passage channel at Unit 1 is in place but is ineffective and not in use.

2.4 Physical Setting

Topography

Site topography is variable but generally moves from higher elevations in the north to lower elevations in the south. The Naugatuck River flows north to south and runs from approximately 50 ft above mean sea level at the impoundment at Unit 1 to approximately 15 ft above mean seal level at Unit 2 with a large drop at the Unit 1 spillway of approximately 30 ft. From the bottom of the spill way, the river slopes gently lower as it meanders south towards Ansonia, CT. The adjacent canal that connects the Unit 1 impoundment to Coe Pond and Unit 2 slopes gently lower as it travels south towards Coe Pond, Unit 2 and Ansonia, CT.

Surface Water

The Kinneytown Hydroelectric Damis located on the Naugatuck River and formerly used water from the river to drive two turbines to generate electricity. The river has long been utilized for fishing, commercial manufacturing, and industrial production since it was first settled by both indigenous populations and European settlers. Prior to the Clean Water Act of 1972, the river was infamously contaminated by

industrial dumping and caught fire in 1943. The river has made an environmental recovery since 1972 and is now used for recreation by local communities. Several dams were removed from the river and fish passage structures were installed around other areas to improve reactional activities.

Surface runoff is expected to flow into either the Naugatuck River or the Kinneytown Dam Canal which are directly below many of the site facilities. No storm drains are located or immediately next to the Site. Federal Emergency Management Agency Flood Insurance Rate Map #09009-C040-2J shows the Site to be located in a regulatory floodway. This map is included in Appendix C.

Wetlands

A review of the United States Fish and Wildlife Service National Wetlands Inventory identified riverine, freshwater emergent wetland, and freshwater forested/shrub wetland systems within the vicinity of the Site. No wetlands were observed during the site visit. A wetlands delineation study was not performed for this Phase I ESA. The wetlands inventory map is included in Appendix C.

Soils and Geology

A review of the Natural Resources Conservation Service National Cooperative Soil Survey shows that the Site's soils primarily consist of Udorthents-Urban land complex and Hinckley loamy sand with 15-45% slopes, covering 15.7% and 16.9% of the Site and surrounding area respectively. 66% of the area is classified as water. The remaining 1.4% is classified as Agawam fine sandy loam, Urban land-Charlton-Chatfield complex, rocky, 3 to 15% slopes, and Fluvaquents-Udifluvents complex, frequently flooded. These soils are defined as well-draining to excessively-drained with medium to low runoff.

The Site is located in the Western Highland geological region of Connecticut. According to the Surficial Materials Map of Connecticut, surficial materials at the Site generally consist of sand and gravel with areas of thin (10-15 ft. thick) glacial till and areas of alluvium overlaying undifferentiated coarse deposits.

Based on the Bedrock Geologic Map of the Ansonia Quadrangle, bedrock beneath the Site consists of several different rock types. Bedrock along the west bank of the Naugatuck River around the Site is Southington Mountain Schist, which is an interlayered medium-to fine-grained gray muscovite schist and slabby gray quartz-rich paragneiss. Bedrock beneath the dam and on the east bank of the river is Prospect Gneiss, a granodiorite gneiss. Coe Pond overlays Southington Mountain Schist and Pegmatite, which is medium- to coarse-grained and yellowish-gray to white or pinkish-gray. Bedrock outcroppings are visible along parts of the dam impoundment. No borings at the Site have been advanced to bedrock.

The soils and geology maps are included in Appendix C.

Groundwater

The Connecticut Department of Energy and Environmental Protection (CTDEEP) Aguifer Protection Areas Map shows that the Site does not lie within a Preliminary, Final, or Final Adopted Aquifer Protection Area. The Aquifer Protection Area map for Seymour, Derby, and Shelton, CT can be seen in Appendix C. Buildings and residences in the area of the Site obtain their drinking water from the municipal water supply. The

U.S. Department of Transportation

Volpe National Transportation Systems Center

CTDEEP Surficial Aguifer Potential Map shows course-grained deposits of approximately 0-50 feet thick. Borings have been advanced at the site by hand in the Unit 1 impoundment where depth to groundwater is effectively immediate. Groundwater is expected to flow from north to south, along the Naugatuck River.

2.5 Adjoining Properties and Surrounding Area

The Town of Seymour and City of Ansonia website maps were reviewed to identify properties that surround the Site. These properties were also observed during the Site visit. ASTM E1527-13 defines adjoining properties as "any real property or properties the border of which is contiguous or partially contiguous with that of the Site, or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them." Below is a description of the properties adjoining or surrounding the Site.

North

The northern end of the Site consists of the Kinneytown Dam Unit 1 and impoundment. North of the impoundment is the Naugatuck River and downtown Seymour, CT where the river runs under the Broad Street Bridge near Broad Street Park and the Seymour Community Center.

East

Immediately east of the Site are the MTA Metro-North Railroad tracks which run parallel to the Kinneytown Dam canal between Unit 1 and 2 on the eastern border of the site. East of the tracks are predominantly residential communities including the neighborhood of Hotchkiss Heights of Ansonia, CT.

South

The southern end of the Site consists of the Kinneytown Dam Unit 2 where it connects to the canal from Coe Pond. South of this unit is downtown Ansonia, CT where the Naugatuck River crosses under the Maple Street Bridge.

West

Immediately west of the Site is Connecticut State Route 8, also known as the Ansonia-Derby-Shelton Expressway. The expressway runs parallel along the Naugatuck River and the Site until it starts to move the east at Coe Pond. From Coe Pond to the Kinneytown Dam Unit 2 are residential neighborhoods of Ansonia, CT and undeveloped, forested, riverbank land.

3.0 Historical Records

The following subsections describe the records that were reviewed to understand the history of the Site. The Kinneytown Dam was constructed in 1845 as a diversion dam for a downstream mill and later converted into a hydroelectric dam (Unit 1) with a canal that leads to Unit 2 and the canal dam downstream. Floods have twice destroyed the dam, once in 1910 and again in 1955, and it was twice rebuilt. It is currently in need of repair according to a Federal Energy Regulatory Commission (FERC) communication from 2022, and is rated as a significant hazard by CTDEEP since 2016, with an inoperable

fish ladder. The dams have not been used to generate electricity for any purpose since Fall 2020. The Site has remained in that condition to the present day.

The following subsections describe the records that were reviewed to understand the history of the Site.

3.1 Sanborn Maps

Volpe requested a report of Sanborn maps from Environmental Database Reports (EDR). The Report did not identify any certified Sanborn maps for the Site.

3.2 Aerial Photographs

The EDR request from Volpe included historical aerial photographs. Photographs from 1934 to 2016 were provided and are summarized in this section. These photographs are available as Attachment E.

- 1934 This image shows the Site and its surroundings. Both reservoirs and dams are visible in approximately the same locations where they are now located. A railroad runs parallel to the river along the east side of the river and primary reservoir, and the tracks cross over to the west side of the canal reservoir on a bridge. Residential developments and fields are present to the east and southeast of the canal reservoir. There are trees on the spit between the canal reservoir and the Naugatuck River below the primary dam. There are cleared fields directly west of the primary reservoir and the Naugatuck River below the primary dam, and farther west the land is forested. Derby Ave, a 2-lane road, runs parallel to the west side of the river and primary reservoir, and scattered buildings are located along it.
- 1949 The residential area southeast of the Site has expanded north, replacing some of the fields. A park with a baseball diamond, which was not within the frame of view of the 1934 photo, is visible southwest of the Site.
- **1951** The residential area east of the Site has continued expanding north and west.
- 1963 Connecticut Route 8, a 4-lane divided freeway, has been built between Derby Ave and the Site. The east residential area has continued expanding. The trees on the spit between the canal reservoir and the Naugatuck River (below the primary dam) are gone. Both dams have been rebuilt in the same locations. In both reservoirs, the water level appears lower compared to prior photographs. A new residential area and strip mall have appeared west of the canal reservoir on Derby Ave, replacing some of the forested area.
- 1972 The water level has increased and is now comparable to prior photographs (excepting 1963). The residential area east of the Site has continued expanding north.
- 1980 and 1985 The water level in the reservoirs remains relatively constant. Trees are beginning to appear on the spit between the canal reservoir and the Naugatuck River again.

- 1991 A new building is present west of the canal reservoir on Derby Ave. The residential development east of the site has become denser, with some trees that previously divided streets being replaced with houses.
- 1995 No changes visible. Only the north half of the Site is visible in this photograph.
- 2006 and 2012 There is some new residential development west of Derby Ave.
- 2016 Some sand bars have appeared in the upper reservoir. One is vegetated.

3.3 Topographic Maps

The EDR request from Volpe included a Topographic maps report. Maps from 1889 to 2018 were provided and are summarized in this section. The maps are available as Attachment F.

- **1889** This map depicts the former earthen dam at the location of Unit 1. The canal is visible as well as what appears to be Coe Pond. The town of Seymour and city of Ansonia both appear to be settled and can both be seen on the map. Major roads are visible but are not named on the map including what is now Connecticut State Route 8. The current day MTA Metro-North Railroad tracks are also shown on the west bank of the Naugatuck River.
- **1891** Some additional development can be seen in the surrounding municipalities of Ansonia and Seymour. The Site remains the same as shown on the previous map.
- **1893** Some additional development can be seen in the surrounding municipalities of Ansonia and Seymour. The borders between Seymour and Ansonia have been adjusted slightly. The Site remains the same as shown on the previous map.
- **1943** This map only shows downtown Seymour and the northern extent of the Unit 1 impoundment. The majority of the Site is shown as "unmapped".
- 1953, 1954 This map is a higher resolution and shows greatly increased development since the previous map year. The two dam units are visible as well as the canal and Coe Pond. The Naugatuck River appears to have been filled in on the east side of the bank and appears to be much thinner immediately south of the Unit 1 powerhouse than in previous maps. Ansonia is shown with additional commercial density development. Connecticut State Route 8 is now labeled on the map. The adjacent neighborhood known today as Hotchkiss Heights can be seen to the north and west of Coe Point.
- 1964 This map shows continued development and increased density in the city of Ansonia. Seymour shows increased development as well but is not shaded as such and appears to be less developed than Ansonia. The Site has not changed; however the Naugatuck River appears to be thinner immediately south of the Unit 1 powerhouse than in previous years.

- 1972 Development continues to increase, and additional settlements and residential units can be seen on this map. The Naugatuck River appears to be at its thinnest seen in these maps. The canal and Coe Pond both appear to be the same.
- 1984 Some additional development can be seen in this map since 1972. The Naugatuck River appears to have recovered and is no longer filled in south of Unit 1. The railroad tracks on the east bank have been labeled "Boston and Maine".
- 2012, 2015, 2018 These maps show the updated USGS Topographic Map style. The Unit 1 impoundment is labeled as Naugatuck River Reservoir in 2015 but not in 2018. The Site appears the same as in previous maps.

3.4 Local Street Directories

EDR provided Volpe with a local street directory report. Records from the Price & Lee's City Directory, Johnson's City Directory and the EDR Digital Archive from 1964 through 2017 do not list any properties associated with the Kinneytown Dam. Private owners and businesses are listed along South Main Street in Seymour, CT over the years.

The local street directory report and property card are included in Appendix G.

3.5 Other Historical Sources

NVCOG provided the grant application report submitted to National Oceanic and Atmospheric Administration (NOAA) Restoring Fish Passage through Barrier Removal Funding Opportunity (hereinafter referred to as NOAA Grant). The NOAA Grant report included an overview on dam history and operations, engineering as-built drawings from 1910, 1957, 1980, and a property survey in 1984. Additional records provided include a 1986 bill of sale for the dam property, an MTA lease agreement, an "Archaeological Assessments of Dams within the Naugatuck River Valley" report, and recent sediment sampling results collected by Save the Sound from within the Dam impoundment. Sediment sampling results are discussed further in Section 5.3.

The "Archaeological Assessments of Dams within the Naugatuck River Valley", prepared by Luciarne Lavin and Robert Stewart, American Cultural Specialists, for Milone & Macbroom, Inc. in April 1999, is a narrative report investigating and documenting the history of seven dams located along the Naugatuck and Mad Rivers in Litchfield and New Haven counties, including the Tingue Dam situated directly upstream of the Kinneytown Dam in downtown Seymour. The history and investigation of the Tingue Dam provides useful contextual information related to historical industry within the Naugatuck Valley and potential offsite receptors that could impact the Site. Previous sediment sampling performed at the dam in 1998 identified the presence of PAHs above the CT Direct Exposure Criteria for class A groundwater, and building debris found in soil borings was assumed to be from historical destruction of buildings from previous flooding.

Additional operational documents, inspection reports, and communications between FERC and Kinneytown Dam operators were reviewed on the FERC eLibrary (https://elibrary.ferc.gov/) using Docket No.: P-6985. Records were provided from 1983 through 2022.

4.0 Environmental Records

4.1 Environmental Database Search

Volpe requested an environmental database records search from EDR for the Site. A total of 115 environmental databases were searched for records. One environmental record was identified for the Site as an electric generator with the US Emissions & Generation Resource Database (EGRID), which contains data on power plants and electricity generators in the United States.

All records that were identified within one mile of the Site are summarized in the table below. The full EDR Radius Map Report, including databases searched and acronyms, is attached as Appendix H. Records with CTDEEP associations were reviewed on the DEEP Document Online Search Portal (https://filings.deep.ct.gov/DEEPDocumentSearchPortal) for additional information. Records with USEPA associations were reviewed on the USEPA Facility Registry Service (FRS) (https://www.epa.gov/frs/frsquery) for additional information.

Table 1 – Summary of Environmental Database Records					
Site	Database	Summary			
Sites < 1/8 miles from the Site					
Anaconda American Brass	CT LWDS	Leachate and wastewater discharge.			
Kinneytown New Old, Derby Ave.	FINDS	Kinneytown Dam identified as Electric Generator. EPA Registry ID:110028034507			
Route 8 North Bound Exit 20	CT SPILLS	Motor vehicle accident and estimated 10 gallons of gasoline released. "Speedy Dryed" response measure applied to soak up spilled gas. Dated 5/11/2004.			
Route 8 Exit 20 South	CT SPILLS	Motor vehicle accident and estimated 1 gallon of motor oil released. "Speedy Dryed" response measure applied to soak up spilled motor oil. Dated 7/10/2006.			
Route 8 Southbound Exit 20	CT SPILLS	Motor vehicle accident and estimated 5 gallons of gasoline released. No response measure reported. Dated 3/9/1993.			
David DiGiorgi 682 S Main St.	CT UST	3,000-gallon diesel Underground Storage Tank removed, unknown date. Tank status is closed. Based on next finding, removal is estimated 1/18/2001.			
Former Benny's Auto Body 682 S Main St.	CT LUST, CT PROPERTY, CT SPILLS	Following removal of 3,000-gallon diesel UST registered to David DiGirogi, tank reported to LUST program on 1/18/2001 due to visual soil contamination. Property ownership was transferred 10/15/2021.			
Pat's Auto Body 634 S Main St.	CT SDADB, CT UST, CT CPCS	Listed in CT Site Discovery and Assessment Database and remediation complete 10/3/1997.Registered having 4,000-gallon heating oil UST from 1959 to 1971.			
Pat's Auto Body 634 S Main St. RCRA NonGen / NLR, FINDS, ECHO, CT MANIFEST		Conditionally exempt small quantity generator. EPA Registry Id: 110002480752. Listed in non-active status. Annual hazardous waste manifests documenting disposal of waste flammable liquids from 1987 to 1995.			
Gene's Auto Body Repair 619 S Main St.	RCRA-SQG, FINDS, ECHO, CT MANIFEST	Conditionally exempt small quantity generator. EPA Registry Id: 110003016012. Listed in active status with no compliance violations identified. Annual hazardous waste manifests documenting disposal of waste flammable liquids from 1999 to 2003. Additional waste manifests documenting disposal of paint related materials from 1994 to 2004.			
Derby Avenue Auto Sales 688 Derby Ave.	CT UST	1,000-gallon gasoline UST registered from 1972 until 1990. No reported releases documented.			
Clean Harbors Environmental Services Inc. 770 Derby Ave.	CT MANIFEST	Hazardous waste manifest documenting disposal of sodium hydroxide and hypochlorite solutions in 2014, disposal of PCBs in 2016, disposal of hazardous substances in 2017, and disposal of antifreeze in 2017.			
ADS of Connecticut 770 Derby Ave.	CT SPILLS, CT MANIFEST	A small container spill (5 gallons of gasoline) reported on 2/18/2015. Hazardous waste manifest documenting disposal of waste paint material in 2006.			
Browning Ferris Ind. Of CT Inc. 770 Derby Ave.	CT SDADB, SPILLS, CT MANIFEST	Listed in CT Site Discovery and Assessment Database and remediation complete 5/1/1997. Added to SPILLS database on 3/28/2022 following release of 10 gallons of a low pH aqueous solution. Multiple hazardous waste manifests documenting disposal of waste paint materials from 2006 to 2010.			
Eversource Energy E Springfield WC 770 Derby Ave.	CT MANIFEST	Hazardous waste manifest documenting disposal of unknown material in 2018.			

Table 1 – Summary of Environmental Database Records				
Site	Database	Summary		
Seymour Maintenance Garage 758 Derby Ave.	CT UST	A 2,000-gallon gasoline UST registered from 1994 to 2000; a 4,000-gallon gasoline UST registered from 1986 to 1995; a 3,000-gallon gasoline UST registered from 1983 to 1995; a 1,000-gallon gasoline UST registered from 1952 to 1988; and a 2,000-gallon gasoline UST registered from 1952 to 1988. All previously listed tanks removed from ground and closed. A 2,000-gallon gasoline UST registered from 1988 and abandoned in ground unknown date. A 1,000-gallon heating oil UST registered from 1989 and currently in use.		
CT Department of Administration Services Fleet	RCRA-VSQG, FINDS, ECGO, CT Manifest	Conditionally Exempt Small Quantity Generator EPA Registry Id: 110006491493. Listed in active status with no compliance violations identified. Hazardous waste manifest documenting disposal of ignitable waste in 2000.		
Seymour Town STP	CT LWDS	Leachate and wastewater discharge.		
JC Auto Body 751 S Main St.	CT LUST, CT MANIFEST	LUST reported on 3/20/1986. No additional details provided. Hazardous waste manifest documenting disposal of haz waste in 2012.		
Charlie's Servive (sic) Station 753 S Main St.	CT UST	A 6,000-gallon gasoline UST registered from 1987 to 2022; a 4,000-gallon gasoline UST registered from 1987 to 2022; a 4,000-gallon gasoline UST registered from 1987 to 2022; a 4,000-gallon gasoline UST registered from 1967 to 1986; a 2,000-gallon gasoline UST registered from 1967 to 1986; a 2,000-gallon gasoline UST registered from 1967 to 1986; a 2,000-gallon gasoline UST registered from 1967 to 1986; a 1,000-gallon used oil UST registered from 1967 to 1986. All tanks listed as closed.		
Charlie's Service Station 753 So Main St.	EDR Historic Auto	EDR records listing facility as an active gasoline service station or automotive repair shop from 1967 to 2011.		
Sabo Auto Body Inc. 746 Derby Ave	A-VSQG, FINDS, ECHO, CT MANIFEST	Conditionally Exempt Small Quantity Generator EPA Registry Id: 110003013131. Listed in active status with no compliance violations identified. Hazardous waste manifests documenting disposal of unknown wastes in 2002-2013.		
Sabo Auto Body Inc. 746-748 Derby Ave	CT AUL	Listed as CT AUL in 2/2021.		
Seymour Sewage Treatment 723 Derby Ave.	CT UST	A 2,000-gallon diesel UST registered from 1991 and currently in use; a 4,000 gallon heating oil UST registered from 1991 and currently in use.		
Daddios Auto Parts Inc. 728 Derby Ave.	CT MANIFEST, RCRA- VSQG, FINDS, ECHO, RI MANIFEST, CT UST	Multiple hazardous waste manifests documenting disposal of ignitable waste and gasoline in 2007 and 2008. Additional CT waste manifests documenting disposal of hazardous waste in 1988-1992 and RT waste manifests documenting disposal in 2003. Conditionally Exempt Small Quantity Generator for ignitable waste, lead, benzene, and tetrachloroethylene. EPA Registry Id: 110002494051. Listed in active status with previous compliance violations reported in 2008 and resolved in same year. A 2,000-gallon diesel UST registered from 1975 until its removal in 1998; a 2,000-gallon gasoline UST registered from 1975 until its removal in 1998; a 2,000-gallon used oil UST registered from 1978 until its removal in 1998.		

Table 1 – Summary of Environmental Database Records				
Site	Database	Summary		
31 Bellevue Terrace	CT SDADB	Spill reported 10/26/1994 for pesticides/herbicides.		
Mangione Constriction Co 7 Hillside Ave	CT MANIFEST, CT UST	Two hazardous waste manifests documenting disposal of ignitable waste in 1989. A 4,000-gallon gasoline UST registered from 1979 and removed unknown date; a 2,000-gallon gasoline UST registered from 1979 and removed unknown date; a 500-gallon gasoline UST registered from 1979 and removed unknown date; and a 4,000-gallon gasoline UST registered from 1979 and removed unknown date.		
Shell Facility No. 100057 Route 8 and Great Hill Rd.	CT LUST	LUST entered 4/5/2005; no further information provided.		
		Sites 1/8 to 1/4 miles from the Site		
CT DOT Derby Ave Route 334 at Route 8	CT LWDS	Active leachate and wastewater discharge activity.		
Valley Division Office New Haven Ave.	CT UST	A 1,000-gallon gasoline UST registered from 1976 to 1992 and removed from ground.		
Southwood Apartments 390 S Main St.	CT UST	A 1,000-gallon heating oil UST registered from unknown date until its removal in 2004.		
		Sites 1/4 to 1/2 miles from the Site		
Burns Construction 16 Riverside Dr.	CT AUL, CT ENF	Listed as CT AUL in 7/2018. CT enforcement action levied on 8/25/2021 for failure to monitor particulate matter. No further information provided.		
United States Coast Guard Housing	CT LUST	LUST entered 9/24/1999. Release documented as abandoned heating oil USTs related to former housing.		
Ansonia Copper and Brass Inc. River St. Ansonia, CT	CT SDADB, CT CPCS	Property Transfer Program referral for remediation program on 10/21/1998.		
Ansonia Copper and Brass 75 River St.	CT AUL	Incomplete information provided for this listing.		
Ansonia Copper and Brass Inc. 75 Liberty St.	CT SPILLS, CT CPCS	A 5-gallon spill of cadmium into a catch basin reported on 8/4/1997; a small spill of pickling acid bath rinse water reported on 8/31/1998; a 10-gallon spill of cutting oil into nearby water body reported on 12/06/1999. LUST completed on unknown date.		
Liberty Street Ansonia Copper and Brass 75 Liberty St.	SEMS, RCRA-LQG, LIENS 2, PRP, NY MANIFEST, CT MANIFEST	Property is listed in SEMS, however it is not on the NPL. Site was reassessed in 1981, 1984, 1991, 2001, 2005, and 2017. Site is listed as RCRA-Large Quantity Generator with biennial reporting provided between 2001-2011. Facility has received notices of violation for used oil in 2013, general violations in 1993 and 2016, universal waste in 2013. Enforcement actions were taken, and compliance is complete. LIENS listed for unreported action in 2017, completed in 2021. Multiple hazardous waste manifests for NY and CT documenting disposal of materials from 2016-2018.		

U.S. Department of Transportation

Volpe National Transportation Systems Center

Table 1 – Summary of Environmental Database Records					
Site	Database	Summary			
Ansonia Copper and Brass Assessment and Improvements 75 Liberty St.	CT BROWNFIELDS	Listed in Brownfield Municipal Grant Program for 2015.			
Anaconda American Brass Co. 75 Liberty St.	CT SHWS, CT SDADB, CT CPCS	Inventory of hazardous waste disposal sites, Arco Metal Co. 1985, referred to Superfund program in 1987. LUST program pending for 1995 release.			
Ansonia Copper and Brass Inc. 75 Liberty St.	CT LUST, CT SPILLS, CT ENF, CT NPDES	LUST program for 1988 gasoline UST leak during tank removal. Cleanup initiated 1999. Spill reported in 1994 for release of petroleum from tank. Listed as contained. Enforcement action taken in 2007 for unreported incident. Stormwater compliance violation listed in 2016. Additional violations listed for 2007, 2011, 2014, 2016. NPDES permits listed for 1980-2024.			
Ansonia Copper and Brass Inc. 75 Liberty St.	CT SPILLS, ICIS, FTTS, FINDS, ECHO, CT AIRS, CT CPCS, CT ENF, NY/NJ MANIFEST	Multiple spills listed from 2005-2007. Written violation related to NPDES permits listed. Listed as a RCRA generator with multiple violations still outstanding, despite facility no longer in operation. Historic air quality permits issued for previous facility operations. Multiple hazardous waste manifests for NY and NJ documenting disposal of materials from 2004-2018.			
Shell Gas Station 22 Great Hill Rd.	CT LUST, CT SPILLS	CT LUST entered in 1998 for gasoline release and 10 cubic yards of cleanup. Naugatuck River listed as potential receptor, 528 ft. east of the gas station. Subsurface soil sampling performed in 2008. Additional site cleanup performed in 2008 and lists removal of 3,000 tons of soil.			
Ansonia Copper and Brass 14 Riverside Drive	CT AUL	AUL approved in 2015. No additional information provided.			
BIRM-I Construction 10 Riverside Dr.	CT AUL, CT CPCS, CT NPDES	AUL initiated but withdrawn in 2014. NPDES permits listed for vehicle maintenance wastewater, 1999-2021.			
Joe Brozack 46 Lane Rd.	CT LUST, CT CPCS	LUST listed in 1991, no further information provided.			
Ansonia Copper and Brass 8 Riverside Dr.	CT AUL	AUL initiated in 2012 but withdrawn in 2014.			

4.2 Environmental Records Significant to the Site

From the environmental database search discussed above, the findings have been narrowed down to records that are most likely to have a potential impact on the Site. The largest potential impacts come from the Ansonia Copper and Brass Inc., which has changed ownership and titles over the decades it has been in operation. Formerly known as the Anaconda American Brass Co., the original Ansonia Copper and Brass Co. was founded in 1845 and is located adjacent to and south of the Canal Reservoir Dam. Potential releases from this location were unlikely to have traveled upgradient towards Coe Pond, however, it is unknown what type of historic operations may have impacted the vicinity of Coe Pond and the Canal Dam.

There are several findings related to former automotive repair shops and presence of historic USTs. Many of these locations are along the west bank of the Naugatuck River and Site property. It is possible but unlikely that the sites listed above have current or former releases of hazardous substances and/or petroleum products with the potential to migrate to the Site.

5.0 User-Provided Information

Per ASTM 1527, "a user that is an EPA Brownfield Assessment and Characterization grantee, has specific responsibilities for completing a successful application of this practice." An EPA Brownfields Targeted Assessment Application Form was prepared by the NVCOG. The ASTM practice states that the user is responsible for providing information summarized in the sections below. The user-provided information is included as Appendix I.

5.1 Title and Ownership

The user states that the Site is owned by Kinneytown Hydro Company Inc. with C/O Consolidated Hydro Inc., a subsidiary of ENEL Green Power North America Inc. The Site consists of three parcels: 769 Derby Ave. Seymour CT, 06483; 677 S Main St. Seymour CT, 06483; and 0 Hotchkiss Terrace, Ansonia, CT 06401. According to the Assignment and Bill of Sale, the Site was acquired on April 15, 1986 by Kinneytown Hydro Company from Atlantic Richfield Company (Arco). Metro-North Commuter Railroad, a subsidiary of MTA, holds a leasing agreement from 1984 with Arco Metals Company for wire, pipe, and cable crossings associated with the rail line adjacent to the Dam property.

5.2 Environmental Liens or Activity and Use Limitations

Representatives of the City of Ansonia and Town of Seymour did not disclose any information indicating the presence of environmental liens or activity and use limitations at the Site.

5.3 Specialized and Actual Knowledge or Experience

The user did indicate knowledge or anticipation of RECs present at the Site due to similar sediment sampling performed at other upstream dams along Naugatuck River and historic contamination found in sediments at other dam removal sites upstream. The application details proposed sediment sampling that will be performed within the Site impoundment prior to dam demolition.

Interviews with Laura Wildman of Save the Sound provided actual knowledge of potential RECs on Site. Limited sediment sampling was performed in two locations within the Site impoundment north of the Dam structure in December 2022 and included the collection of five samples analyzed for herbicides, pesticides, polyaromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), semivolatile organics (SVOCs), volatile organics (VOCs), and metals. Laboratory analysis identified several detections exceeding CT Residential Direct Exposure Criteria for Soil Criteria, including PAHs, SVOCs, and VOCs. Additional visual findings included the presence of petroleum-like sheen and odors within the sediment.

Volpe National Transportation Systems Center

5.4 Valuation

The application states that the Site was purchased for \$1 and that the Site is assessed at \$622,830. The appraised value of the site is \$889,800. Future acquisition of the property by NVGOC is pending.

5.5 Commonly Known or Reasonably Ascertainable Information

The proposed acquisition and removal of the Kinneytown Dam has been covered in local and regional media for several years, due to the dilapidation of the dam infrastructure and the negative impacts on fish migration in the area. News articles discussing recent structural issues at the dam and concerns over the inoperable fish ladder can be found online but mainly focus on the benefits of the removal of the dam project and not regarding knowledge of any environmental releases or recognized conditions.

6.0 Site Reconnaissance

On January 12, 2023, Evan Starr, Emilio Paleo, and Jacob Klaybor from Volpe visited the Site to perform reconnaissance activities. They were met by Aaron Budris and Ricardo Rodriguez from the NVCOG, Wayne Chernek from Hydroland, and Laura Wildman from Save the Sound. Save the Sound is a regional nonprofit organization comprised of scientific professionals focused on environmental and legislative advocacy across New York and Connecticut. A scanned copy of field notes from the Site visit is included in Appendix J.

The table below identifies features listed in Section 9.4 of ASTM 1527 that were assessed during reconnaissance of the Site.

Table 2 – Site Features Observed During Reconnaissance				
Feature Observed Comments				
Structures and Other Improvements		Structures at the Site were assessed during the Site visit. A full description of structures and site improvements is included in Section 2.1 of this report.		
Roads Yes		The Site includes a short, paved access road on the west bank of the Naugatuck River between the Unit 1 Powerhouse and the Unit 1 Intake. An additional paved access road provides access to the Canal Gatehouse on the east bank of the river to S. Main St. (Route 115). A single-track rail line for the Metro-North Railroad runs adjacent to the site. The track appeared in good condition and is active. Several passenger trains were observed during the Site visit.		
Potable Water Supply/Source	No	No sources of potable water were observed during the Site visit.		
Sewage Disposal System No		Two buried sanitary sewer lines run east-west under the river, upstream of the Kinneytown Dam. A chemical toilet was staged outside of the Unit 1 Intake fence.		

Table 2 – Site Features Observed During Reconnaissance				
Feature	Observed	Comments		
Hazardous Substances and Petroleum Products	Yes	Several waste oil drums were also observed inside and next to a storage container located next to the Unit 1 Powerhouse. 60 lead-acid batteries were observed in the Unit 1 Powerhouse.		
Storage Tanks	Yes	A portable light system, which is presumed to contain a mobile generator and fuel storage tank was observed in the parking area next to the Unit 1 Intake. A 500-gallon oil storage tank associated with the Unit 1 Powerhouse turbine hydraulic pump and a similar, smaller tank in the Unit 2 Powerhouse were observed.		
Strong, Pungent, or Noxious Odors and their Source	No	No strong, pungent, or noxious odors were observed during the Site visit		
Standing Surface Water and Pools or Sumps Containing Liquids Likely to be Hazardous Substances or Petroleum Products	. No	No standing surface water, pools, or sumps containing liquids likely to be hazardous substances or petroleumproducts were observed during the Site visit.		
Drums, Totes, and Intermediate Bulk Containers	Yes	Multiple plastic drums were observed in the river beneath the Kinneytown Dam, however these drums were used as floats for a boat barrier and do not contain any hazardous substances or petroleum products. Several waste oil drums were also observed inside a storage container located next to the Unit 1 Powerhouse.		
Unidentified Substance Containers	No	No unidentified substance containers were observed during the Site visit.		
PCB-Containing Items	Yes	Transformers located at each of the powerhouses may contain PCBs. Light ballasts inside the buildings may also contain PCBs. Paints, caulking, and other building materials present around the dam may also be PCB-containing.		
Heating/Cooling	No	No heating or cooling systems were observed during the Site visit.		
Stains or Corrosion on Floors, Walls, or Ceilings	Yes	The Canal Gatehouse and Unit 2 Powerhouse were in poor condition. Floors, walls, and ceilings contained signs of significant deterioration, which includes stains and corrosion.		
Drains and Sumps	Yes	A storm drain that flows directly into the river was observed immediately south of the Unit 1 Intake. A sump pump was observed in the Unit 1 Powerhouse.		
Pits, Ponds, or Lagoons	Yes	Coe Pond is located within the Site. No obvious signs of contamination were observed in Coe Pond during the Site visit.		
Stained Soil or Pavement	No	No soil or pavement staining was observed during the Site visit.		
Stressed Vegetation	No	No stressed vegetation was observed during the Site visit.		

Table 2 – Site Features Observed During Reconnaissance				
Feature	Observed	Comments		
Solid Waste	Yes	Impoundments above gates at each of the intakes contained water with significant floating debris, including tires, boats, and trash. A pile of debris wood was observed adjacent to the Unit 1 Intake. Former metal booms were observed in the woods next to the Canal Gatehouse.		
Water/Wastewater Yes		The Naugatuck River, Coe Pond, and the canal are on the Site. No obvious signs of significant water contamination were observed during the Site visit.		
Wells	No	No wells were observed during the Site visit.		
Septic Systems or Cesspools	No	No septic systems or cesspools were observed during the Site visit.		

While solid waste has collected at several locations at the Site, no materials present in this waste appeared to contain hazardous materials or petroleum products. No recognized environmental conditions in connection with the Site were identified during the Site Reconnaissance Visit.

7.0 Interviews

7.1 Key Site Manager

Mr. Wayne Chernek, former operator with Kinneytown Hydro Company, has been identified as the Key Site Manager for the Site and was interviewed during the site reconnaissance visit on January 12, 2023. Mr. Chernek is not aware of any past or present environmental concerns associated with the Site, including environmental liens or activity and use limitations, releases of hazardous substances or petroleum products, or contamination identified through previous sampling investigations. In corroboration with the reviewed engineering as-builts, he confirmed that two sewer pipes cross the Naugatuck River, from east-to-west, north of the Kinneytown Dam structure but within the larger impoundment. Mr. Chernek provided a tour of onsite dam structures, explained general operations of turbine equipment, screening, penstock, and gate houses.

Additional information provided by Mr. Chernek can be found in the site visit notes in Appendix J.

7.2 Occupants

The Site consists of several Dam operations buildings with no occupants other than the Kinneytown Hydro Company.

7.3 Past Owners, Operators, and Occupants

The Site has been owned and operated by Kinneytown Hydro Company since 1986, however there has been no electricity generation since Fall 2020. The Atlantic Richfield Company (ARCO) owned the damn before selling it in 1986. Prior to ARCO's acquisition, several iterations of the American Brass Company, Anaconda American Brass, Anaconda Copper Company, and Ansonia Brass and Battery Company

previously owned and operated the dam, dating back to its construction in the 1840s.

7.4 State and/or Local Government Officials

Seymour Fire Marshall

Town of Seymour Fire Marshal, Timothy Willis, was contacted via email on January 26, 2023, for an interview. A response was received same day. Fire Marshall Willis indicated that he has no records of any spills or hazardous material incidents at the Site and its addresses. There are no records of current or previous fuel storage tanks and no other environmental concerns at the Site.

Seymour/Ansonia Building Inspector

Sheila O'Malley, Economic Development Consultant with the Town of Seymour Building Inspector, was contacted via email on January 26, 2023, for an interview. A response was received on January 27, 2023, stating that a search of paper and electronic files revealed no record of building permits or environmental concerns with the subject property and its addresses.

Naugatuck Valley Health District

An email was sent to the Naugatuck Valley Health District on January 26, 2023, asking for information on any known health or environmental concerns associated with the Site and its addresses. A response was received from Judi Waleski on January 27, 2023, stating that a search of paper and electronic files revealed no record of any health or environmental concerns at the Site.

Naugatuck Valley Council of Government

Conversations were had with Rick Dunne, Ricardo Rodriquez, and Aaron Budris, of NVGC, regarding site history and current plans for the property. Mr. Rodriquez had previously searched the CT DEEP records room in Hartford, CT, and did not find any environmental records or concerns associated with the Site and its addresses. An additional phone request and search by a CT DEEP employee did not reveal any records.

A copy of the interviews with local officials is provided in Appendix K.

8.0 Data Gaps and Limitations

ASTM Practice E1527-13 defines a data gap as "a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.)" It defines a significant data gap as a "data gap that affects the ability of the environmental professional to identify a recognized environmental condition." The following significant data gaps were identified:

Through interviews and records reviews, Volpe was unable to obtain site-specific records sourced at

the CTDEEP records room or online database. In conversations with NVCOG staff, CTDEEP is in the process of digitizing archived records for a new online digital library and records may have been pulled from the storerooms during this process.

This Phase I ESA includes this one limiting condition but no other deletions or deviations from ASTM Practice E1527-13.

9.0 Findings and Opinions

The Phase I ESA of the Site did not identify any features, activities, uses, or conditions from historic Site operations that may indicate the presence or likely presence of significant hazardous substances or petroleum products. Hydraulic waste oil was previously utilized for the hydroelectric turbines on-site; however, this is a closed system housed inside a concrete structure with spill containment. Used oil was stored in drums onsite in a controlled manner and no findings of spills or releases have been identified. Based on the data gap listed above, Volpe is unable to confirm a lack of any historical releases from onsite operations, however, local town records support the likelihood that onsite operations did not result in a recognized environmental condition.

A review of historical and environmental records, a site reconnaissance visit, and interviews with local officials and key site personnel did reveal information that indicates the presence of recognized environmental conditions from off-site receptors. Historical information related to floods that occurred within the Naugatuck Valley in 1910 and 1955 that destroyed or compromised older dam structures upstream and at the Kinneytown Dam support the anticipated need to evaluate potential hazardous substances and petroleum products in sediment upstream of the Dam and within Coe Pond. Recent limited sediment sampling performed by Save the Sound and NVCG identified the presence of petroleum compounds in sediment within the northern edge of the dam impoundment.

10.0 Conclusions

Volpe has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Site. Any exceptions to, or deletions from, this practice are described in Section 8 of this report. This assessment has revealed the following recognized environmental conditions in connection with the Site:

 There is a potential for sediment contamination resulting from historic releases of hazardous materials and/or petroleum products from upstream off-site receptors.

No additional recognized environmental conditions or significant data gaps in connection with the Site.

11.0 Recommendations

Based on the conclusion stated above, it is recommended that a site investigation be conducted to evaluate the presence or absence of hazardous materials and petroleum products in sediment north of

the dam structure and within Coe Pond. Mechanical drilling is recommended to evaluate the presence or absence of these contaminants from within the vertical extent of sediment down to bedrock within the dam impoundments. Non-scope considerations include a recommendation to perform hazardous materials building inspections prior to the removal and demolition of on-site structures.

13.0 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in § 312.10 of 40 C.F.R. § 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12.000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: State of Connecticut Survey Area Data: Version 22, Sep 12, 2022

Soil map units are labeled (as space allows) for map scales 1:50.000 or larger.

Date(s) aerial images were photographed: Jun 27, 2014—Oct 14, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

AQUIFER PROTECTION AREAS

Shelton, CT

December 23, 2021

Level A APA (Final Adopted)

Level A APA (Final)

Level B APA (Preliminary)

Town Boundary

NOTE: The Aquifer Protection Areas were delineated through Connecitcut's Level A and Level B Mapping Processes. Aquifer Protection Areas are delineated for active public water supply wells in stratified drift that serve more than 1000 people, in accordance with Sections 22a-354c and 22a-354z of the Connecticut General Statutes. Level B Mapping delineates a preliminary aquifer protection area, providing an estimate of the land area from which the well draws its water. Level A Mapping delineates the final Aquifer Protection Area, which becomes the regulatory boundary for land use controls designed to protect the well from contamination. As Level A Mapping is completed for each well field and approved by DEEP, it replaces the Level B Mapping. Final Adopted Level A Areas are those where towns have land use regulations for them

Masschusetts and Rhode Island Wellhead Protection Areas may be shown for informational purposes.

EXPLANATION

In the descriptions of rocks below, minerals are listed in approximate order of decreasing abundance. Grain sizes are as follows: fine, less than 1 mm; medium, 1-5 mm; coarse, more than 5 mm. Descriptions of rocks older than Buttress Diabase do not include randomly distributed minerals formed by retrograde metamorphism after the climax of the latest progressive regional metamorphism. The retrograde metamorphism resulted in slight to complete alteration of minerals as follows: kyanite and staurolite mainly to sericite, biotite to chlorite. garnet to sericite and chlorite, pyrite to hematite, and rutile and ilmenite to leucoxene

Medium- to fine-grained, porphyritic diabase; dark-gray to dark greenish-gray groundmass composed of calcic labradorite, augite, pigeonite, magnetite, and minor alkalic feldspar, biotite, hornblende, calcite, chlorite, serpentine (?), and apatite; grayish-green phenocrysts of calcic bytownite as much as 10 mm in diameter are distributed sparsely and irregularly through the rock and are not visible in every outcrop. Intrudes New Haven Arkose and West Rock Diabase in adjacent New Haven and Mount Carmel quadrangles

Pegmatite Medium- to coarse-grained, yellowish-gray to white or pinkish gray, granitic to quartz quartz, microcline, albite or oligoclase, muscovite, biotite, and minor apatite, garnet, and tourmaline. Includes some pegmatite approximately the same age as Ansonia Gneiss and Woodbridge Granite. Rather well foliated in some places

Dq-Quartz vein or pod Mainly white to colorless quartz

Medium-grained, well-foliated, well-lineated, very pale bluishgray to yellowish-gray, granitic to quartz dioritic but commonly quartz monzonitic gneiss composed of quartz, sodic oligoclase, and minor apatite, zircon, tourmaline, and garnet. Microcline content highest where associated with Prospect Gneiss, as at type locality; in large body at western edge of quadrangle, plagioclase much more abundant than microcline. Intrudes and contains xenoliths of Southington Mountain Schist and Prospect Gneiss; boundaries generalized in many places; may contain Southington Moun-

tain Schist and Prospect Gneiss

Ansonia Gneiss

Woodbridge Granite Oligoclase granite to sodic quartz xenoliths of Wepawaug Schist; Housatonic River and there resembles microline-poor Ansonia

Dw, medium-grained, very pale greenish-white to creamy-white oligoclase granite or sodic quartz diorite composed of sodic oligoclase, quartz, muscovite, biotite, microcline, and minor pyrite, rutile, apatite, and zircon; calcite abundant locally near south end of largest body. Dwg, granitic to quartz dioritic Woodbridge Granite, Dw, and Ansonia Gneiss; locally con-

tains abundant pegmatite Dwp, fine-grained, medium lightgray to greenish-gray, porphyritic dikes related to Dw, but locally contains more microcline; groundmass mainly oligoclase (or albite), quartz, and small amounts of mica and potassium feldspar; phenocrysts are one or more of the following minerals: albiteoligoclase, microcline, quartz, and muscovite

Prospect Gneiss Coarse- to medium-grained, well-foliated and well-lineated, light-gray, granodioritic to quartz monzonitic gneiss containing dark-gray biotitic folia. Boundaries generalized between subdivisions Dpg and Dpp and in some places where foliation crosses contacts. Composition generally uniform within subdivisions Dpg and Dpp, except near contacts with other units. Intrudes and contains xenoliths of Southington Mountain

Dpg, mainly granodiorite gneiss composed of intermediate to calcic oligoclase, quartz, biotite, microcline, sphene, clinozoisite, and minor muscovite, hornblende, garnet, apatite, zircon, calcite, ilmenite, rutile, chlorite, pistacite, pyrite, and tourmaline

Dpp, mainly porphyroblastic quartz monzonite gneiss composed of sodic to intermediate oligoclase, microcline, quartz, muscovite, biotite, and minor sphene, garnet, apatite, zircon, tourmaline, ilmenite, and epidote. White microcline porphyroblasts as much as 3 inches in diameter locally contain small zonally arranged inclusions of matrix minerals, and may represent, in part, recrystallized phenocrysts

Wepawaug Schist Interbanded medium- to fine-grained, argillaceous, siliceous, and minor calcareous metasedimentary rocks; metamorphic grade increases toward west-northwest; grain size ranges from fine in chlorite zone (east

of garnet isograd) to medium in kyanite zone DSw, mainly interlayed medium light-gray to dark-gray phyllitic schist and medium- to dark-gray quartz-rich paragneiss west of garnet isograd, especially in staurolite and kyanite zones; east of garnet isograd banding less distinct and typical rock is phyllite composed of quartz, muscovite, chlorite, albite, and minor purite, rutile, tourmaline, apatite, zircon, and dustlike carbon. Garnet and biotite porphyroblasts. 1-4 mm in diameter and staurolite and kyanite crystals 15-50 mm long characteristic of pelitic rocks in appropriate metamorphic zones, although kyanite and staurolite difficult to recognize in many places because of retrograde metamorphism

DSwa, medium-grained, medium-gray to dark greenish-gray, clinozoisitebearing amphibolite generally coarser grained and less well foliated than amphibolites in older metasedimentary and metavolcanic formations. Main minerals are actinolitic hornblende, clinozoisite, and quartz; minor minerals are garnet, chlorite, sphene, and calcite, as well as accessory rutile and apatite. Mainly in western part of formation, where metamorphic grade is high enough for amphibole to form; less metamorphosed equivalents not mapped. Associated with coarsegrained, medium light-gray to dark-gray calc-silicate rocks that contain quartz, zoisite, actinolitic hornblende, clinozoisite, and garnet; also

associated with impure crystalline limestone and marble ${\tt DSwI}, \, medium \, \, dark\hbox{-} gray \, \, to \, \, medium \, \, bluish\hbox{-} gray, \, crystalline \, \, limestone.$ In chlorite zone (east of garnet isograd), composed mainly of calcite, quartz, muscovite, chlorite, and tiny widely spaced cubes of pyrite. In biotite-garnet zone, phlogopitic biotite and clinozoisite are abundant, and microcline may be present. In kyanite zone, characterized by sunburst aggregates of pale-green amphibole, and may contain zoisite and fine-grained diopside. Distinguished from all other calcareous metasedimentary rocks in the map area by color, texture, and mineral

UNCONFORMITY

Allingtown Metadiabase Mainly medium- to fine-grained, dark greenish-gray to dark-gray, intrusive metadiabase. Porphyritic in many places; numerous yellowishgray to light greenish-gray, saussuritized plagioclase phenocrysts 2-8 mm in diameter. Composed of actinolitic hornblende, altered plagioclase, epidote, chlorite, muscovite (mainly sericitic), and accessory magnetite or ilmenite, sphene, apatite, and calcite. Boundaries generalized. Contains numerous inclusions of Oronogue Member of Derby Hill Schist 1-5 feet thick interlayered with sill-like and gently inclined dikelike bodies of metadiabase 1-8 feet thick. Not known to intrude Wepawaug Schist

Maltby Lakes Volcanics Omu, mainly undivided, medium- to fine-grained metavolcanic rocks of mafic to intermediate composition; minor metasedimentary rocks and intrusive metadiabase similar to Allingtown Metadiabase. Greenishgray to dark greenish-gray greenschist and low-grade amphibolite predominate; composed of epidote, actinolitic hornblende, chlorite, sodic plagioclase, and quartz in various proportions, and small quantities of calcite, sericite, sphene, and magnetite or ilmenite; in some places, also contains saussuritized plagioclase clasts and (or) phenocrysts similar to phenocrysts in Allingtown Metadiabase. Probably represents marine tuff and (or) lava, and associated metasedimentary rocks Oms, fine-grained, greenish-gray phyllitic schist similar to Derby Hill

Schist and to matrix of pyroclastic schist, Omp. Contains metabasalt fragments in a few places Omp, pyroclastic schist, meta-agglomerate or metatuff characterized by ellipsoidal greenish-gray to very dark greenish-gray chloritic metabasalt fragments as much as 1 inch thick and 5 inches long rather evenly distributed in a medium- to fine-grained matrix of light to dark green is h-gray schist composed of sodic plagioclase, quartz, muscovite,chlorite, and minor garnet, biotite, magnetite or ilmenite, tourmaline, rutile, epidote, and sphene; contains numerous veins, lenses, and pods of secondary quartz; metabasalt fragments comprise 10-25 percent of rock volume, but decrease in size near eastern edge of area where rock

resembles lapilli tuff

Derby Hill Schirt

Od, mainly medium- to fine-grained, thinly laminated, greenish-gray to medium dark-gray chloritic muscovite schist composed of quartz, muscovite, chlorite, sodic plagioclase, and accessory ilmenite, rutile, tourmaline, zircon, and dustlike carbon. Alternate quartz-rich and muscovite-rich laminae generally less than 5 mm thick. Also contains minor bands of quartz-rich paragneiss as much as 1 foot thick similar to predominant rocks of Oronoque Member. Highly sheared north of Derby and in some places near Housatonic River east of Oronoque Member. Commonly crenulated where not sheared. Boundary generalized between units. Near Shelton, predominant schist appears to be interfingered with Oronoque Member, but in adjacent Milford quadrangle this schist probably underlies Oronoque Member

Odo, Oronoque Member; mainly slabby to thinly laminated, medium-to fine-grained, greenish-gray to medium dark-gray quartz-rich and albite-rich paragneiss with schistose to phyllitic partings and layers containing abundant muscovite and chlorite; in some places in western part of area contains green or brown biotite and a little garnet; accessory minerals are ilmenite, magnetite, rutile, sphene, apatite, tourmaline, zircon, pyrite, and dustlike carbon. Quartz-rich layers from 1 mm to several feet thick are much more abundant than in underlying unit especially in western part of quadrangle. Upper part of member also contains minor unmapped epidote-rich greenschists and amphibolites similar to those characteristic of undivided Maltby Lakes Volcanics Odl, fine-grained, light- to medium-gray limestone containing streaks, lenses, pods, and bands of moderate yellowish-green to dusky yellowgreen serpentine and abundant accessory magnetite

Oda, medium-grained, dark-gray to grayish-black amphibolite mineralogically similar to that characteristic of Maltby Lakes Volcanics in staurolite and kyanite zones in adjacent Milford quadrangle; composed of hornblende, sodic andesine, quartz, epidote, and accessory sphene, ilmenite, rutile, apatite, and pyrite; characterized by moderate greenishyellow streaks, lenses, and knots, less than 1 mm to more than 1 inch thick, composed mainly of epidote and quartz. Also contains minor unmapped impure marble composed of calcite, quartz, diopside, and

Southington Mountain Schist O€s, mainly interlayered medium- to fine-grained silvery-gray to medium-gray muscovite schist and slabby medium light-gray to darkgray quartz-rich paragneiss; impure marble and calc-silicate rocks enerally subordinate, but locally conspicuous near Prospect Gneiss. Schist composed of quartz, muscovite, biotite, sodic oligoclase, garnet, staurolite, kyanite (in kyanite zone only), chlorite, and minor rutile, apatite, ilmenite, tourmaline, and graphite; paragneiss composed of quartz, muscovite, biotite, oligoclase, garnet, and minor tourmaline, Imenite, chlorite, rutile, apatite, and zircon. Contact with Straits Schist generalized

OEsa, medium- to fine-grained, medium-gray to greenish-black amphibolite composed of hornblende, sodic andesine, quartz, clinozoisite, zoisite, sphene, and minor calcite, biotite, zircon, ilmenite or magnetite, chlorite, muscovite, apatite, and pyrite. Contains scapolite and microcline where associated with Prospect Gneiss near Peat Swamp Reservoir O€sc, medium-grained, greenish-gray to olive-gray, chlorite-biotite schist characterized by 1- to 3-inch aggregates of medium- to fine-grained

OEsq, mainly medium-grained, quartz-rich paragneiss and subordinate

quartz, albite-oligoclase, and tremolite; accessory minerals are rutile, lmenite, apatite, epidote, and pyrite O€sm, medium-grained, light greenish-gray to dusky yellow-green, calcite-diopside-vesuvianite marble interlayered with biotite schist and minor amphibolite. Ragged vesuvianite crystals as much as 2 inches long. Accessory minerals are sphene, apatite, and ilmenite

composed of quartz, muscovite, biotite, intermediate to sodic oligoclase, garnet, staurolite, kyanite, ilmenite, and minor chlorite, apatite, tourmaline, zircon, rutile, and graphite. Contains minor unmapped bands of siliceous paragneiss as much as 1 foot thick and a few pods of garnetiferous amphibolite as much as 6 inches in diameter

Generalized in many places, and may include some places where bedrock merely close to surface. Shows distribution of most but not all outcrops in map area. Bedrock covered by till on broad smooth surfaces such as Grassy Hill and by stratified drift or other unconsolidated materials in main valleys, but unmapped outcrops probably can be found in some places on small closely spaced knobs in highlands such as near Tri-

Contact, showing dip Dashed where approximately located; short dashed where indefinite or inferred; queried where location, extent, or nature of contact uncertain

— D-?----?----Inferred fault U, upthrown side; D, downthrown side. Queried where location or extent uncertain

> -----Inferred syncline Showing trace of axial plane, and bearing and plunge of axis

Inferred overturned syncline Showing trace of axial plane, bearing and plunge of axis, and direction of dip of limbs

PLANAR AND LINEAR FEATURES IN METAMORPHIC ROCKS Symbols may be combined

Foliation or flow cleavage

Formed by parallel alinement of minerals, such as mica in schist or gneiss. Generally about parallel to banding or relic bedding in banded metasedimentary rocks, although foliation crosses contacts of pyroclastic schist, Omp, and contact between Derby Hill and Wepawaug Schists where tightly folded near Housatonic River. Number indicates measured dip; queried where uncertain. Symbol for inclined foliation without number indicates direction of dip inferred. Symbol accompanied by \pm indicates dip locally greater or less than that recorded

Fracture cleavage Formed by parallel or nearly parallel arrangement of axial planes of symmetrical crenulations or by alinement of long limbs of asymmetrical crenulations in schist or phyllite

> Shear cleavage Showing relative directions of displacement

Crumpled or contorted foliation and (or) banding Direction of long line indicates generalized strike

Inclined Horizontal $\label{linearing} \begin{tabular}{ll} \it Mineral\ lineation\ unless\ designated\ otherwise; C\,,\, crenulation\ axis;\ FA,\\ \it fold\ axis. & \it Number\ indicates\ plunge \end{tabular}$ LINEAR FEATURES IN DIABASE

→10 FA 35 C 25

Horizontal Plunge of intersections of two or more joint planes

Isograd Denotes approximate eastern limit of zone in which mineral named (kyanite, staurolite, biotite, or garnet) is highest grade macroscopic index mineral in metamorphosed pelitic rocks of Wepawaug Schist and formations to west. Minor microscopic biotite and garnet of uncertain composition present in some rocks of the Maltby Lakes Volcanics and in a few places in the underlying Derby Hill Schist in the southeastern orner of the map area, especially near the Allingtown Metadiabas but generally not recognized in the field

> Macroscopic-mineral localities K, kyanite; S, staurolite

NOTES ON GEOLOGY

Stratigraphy, structure, and regional metamorphism.—The Straits, Southington Mountain, and Derby Hill Schists, the Maltby Lakes Volcanics, and the Wepawaug Schist form a sequence of metasedimentary and metavolcanic rocks of Paleozoic age, which, in Middle to Late Devonian time, was tightly folded, intruded by magmas of felsic to intermediate composition, and subjected to progressive regional metamorphism ranging in grade from chlorite to kyanite (Fritts, 1962a, 1962b). The principal structure formed in this quadrangle at that time is a major syncline, the trough of which is occupied by the Wepawaug Schist. This fold, here called the Wepawaug syncline, plunges north-northeastward and also underlies parts of the adjacent Naugatuck, Mount Carmel, New Haven, Woodmont, and Milford quadrangles. The absence of the Maltby Lakes Volcanics along the western limb of the syncline is interpreted as evidence that this formation had an eastward dip at the time the Wepawaug Schist was deposited uncon-

formably above it. A gradual westward increase in metamorphic grade of the rocks of pre-Triassic age coincides with a westward increase in the complexity of geologic structure. In the southeastern part of the quadrangle, the metamorphic grade of the rocks is low and geologic structure is rather simple. Foliation there, in general, is parallel or nearly parallel to bedding in metasedimentary rocks, although small tight folds are found in some outcrops of even the least metamorphosed rocks. Foliation, however, is not necessarily parallel to the boundaries of metavolcanic rocks such as the pyroclastic schist of the Maltby Lakes Volcanics. Farther west, near the axial plane of the Wepawaug syncline and along the western limb, the rocks have undergone more intense deformation, and in some places mappable nearly isoclinal folds have formed. Thus in the southwestern part of the Ansonia quadrangle, the long tongue of Wepawaug Schist projecting southward into the Derby Hill Schist near the Housatonic River is in the trough of a minor nearly isoclinal syncline along the western limb of the Wepawaug syncline. Although it is possible that other minor folds underlie the valley of the Housatonic farther south, this hypothesis cannot be proved owing to a lack of outcrop. In the adjacent Milford quadrangle, however, several similar folds have been mapped (Fritts, 1965). In general, foliation in the metasedimentary and metavolcanic rocks exposed west of the Wepawaug River in both areas is nearly parallel to the axial planes of the major and minor folds, and obviously crosses stratigraphic boundaries near the axial planes of the

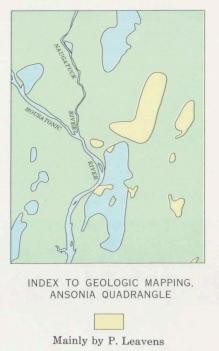

The principal structural feature of Triassic age in the mapped area is the Mixville fault. This fracture forms the western boundary of the Newark Group of Late Triassic age for more than 11 miles in the Mount Carmel and Southington quadrangles (Fritts, 1963). The rocks east of the fault have been downthrown, but the throw is not known to be more than a few hundred feet and a horizontal component of displacement cannot be proved. The fault probably cuts off the Derby Hill Schist near Bethany Lake in the Mount Carmel quadrangle, although the disappearance of the Derby Hill Schist there also could be explained by the fact that it is overlain unconformably by the Wepawaug Schist. Nevertheless the fault is believed to continue southwestward at least as far as the dam at Lake Chamberlain in the southwest corner of the Mount Carmel quadrangle, where there is a marked discordance in attitudes of foliation (bedding) in the Wepawaug Schist. In the Ansonia quadrangle, the position of the fault is less certain and is based mainly on an apparent discontinuity in the garnet and biotite isograds mapped in the Wepawaug Schist. However, the discontinuity, which is in an area where bedrock is largely covered by glacial drift, could be explained as merely an abrupt change in the direction of the isograds. It also is possible that the fault extends into the Milford quadrangle, perhaps beneath the drift-filled valley of the Wepawaug River, but there is no indisputable evidence of a structural discordance in the southern part of the Ansonia quadrangle, and the geologic structure in the Milford quadrangle can be explained without this fracture. The fault, therefore, has not

been mapped south of the town of Orange. Igneous activity.—The Allingtown Metadiabase, Prospect Gneiss, Ansonia Gneiss, Woodbridge Granite, pegmatite, and Buttress Diabase are intrusive rocks that represent at least three episodes of igneous activity. The Allingtown Metadiabase probably was emplaced at about the time rocks of similar composition comprising parts of the Maltby Lakes Volcanics were extruded. Bodies of Prospect Gneiss, Ansonia Gneiss, and Woodbridge Granite, on the other hand, probably were emplaced after initial folding of the Wepawaug Schist and older metasedimentary rocks but before the climax of progressive regional metamorphism in Devonian time. Emplacement of pegmatite and quartz veins accompanied this metamorphism. Dikes of Buttress Diabase were emplaced during or after tilting and faulting of the Newark Group of Late Triassic age, part of which is exposed in the adjacent Mount Carmel and New Haven quadrangles.

QUADRANGLE LOCATION

DISCUSSION OF SURFICIAL MATERIALS The unconsolidated deposits overlying bedrock in Connecticut range from a few feet to several hundred feet in thickness. These earth materials significantly affect human development of the land. Most of the unconsolidated materials are deposits of continental glaciers that covered all of New England at least twice during the Pleistocene ice age. These glacial deposits are divided into two broad categories, glacial till and glacial stratified deposits. Till, the most widespread glacial deposit, was laid down directly by glacier ice and is characterized by a nonsorted matrix of sand, silt, and clay with variable amounts of stones and large boulders. Glacial meltwater deposits are concentrated in both small and large valleys and were laid down by glacial meltwater in streams and lakes in front of the retreating ice margin during deglaciation. These deposits are characterized by layers of well-sorted to poorly sorted gravel, sand, silt, and clay. Postglacial sediments, primarily floodplain alluvium and swamp deposits, make up a lesser proportion of the unconsolidated materials of Connecticut. Alluvium is largely reworked from glacial materials and has similar physical characteristics.

The distribution of surficial (unconsolidated) materials that lie between the land surface (below the pedogenic soil) and the bedrock surface is shown on this map to the extent that it is known or can be inferred. The cross sections (figs. 1 and 2) and the block diagram (fig. 3) illustrate the characteristic vertical distribution of glacial till, glacial meltwater deposits, and postglacial deposits encountered in Connecticut. The areal distribution of till and stratified deposits is related to the physiographic regions of the State: the eastern and western highlands and the central lowland (fig. 4.) Cross section A-A' (fig. 1) transects the central lowland and extends into the bordering eastern and western highlands. In highland areas, till is the major unconsolidated material, present as a discontinuous mantle of variable thickness over the bedrock surface. Till is thickest in drumlins and on the northwest slopes of hills (shaded till areas on map). Glacial meltwater deposits that average 10-40 feet in thickness overlie the till in small upland valleys and commonly in north-sloping pockets between bedrock hills. In the central lowland, especially in the north half, glacial stratified deposits are the predominant surficial materials. These deposits generally overlie till; however, well logs indicate that in some places till is not present and the stratified deposits lie directly on bedrock. The extensive stratified deposits of the central lowland average 50-100 feet in thickness, and in the northern part they almost completely mask the till-draped bedrock surface. Postglacial materials locally overlie the glacial deposits throughout the State. Alluvium occurs on the floodplains of most streams and rivers. Swamp deposits occur in poorly drained areas. Talus occurs along the bases of steep bedrock cliffs, principally along the traprock ridges within the central lowland. Salt-marsh and estuarine deposits occur mainly along the tidal portions of streams and rivers entering Long Island Sound. Beach deposits occur along the shoreline of Long Island Sound.

This map is a companion to the Quaternary Geologic Map of Connecticut (Stone and Schafer, unpublished data). Till and postglacial deposits are shown similarly on both maps. Glacial stratified deposits are particularly emphasized on both maps. These sediments are the major ground-water aquifers in the State and are also the major sources of construction aggregate. On the Quaternary Geologic Map, the glacial stratified deposits are described in terms of depositional environments (fluvial or lacustrine) and depositional chronology. On this the Surficial Materials Map, the texture (grain-size distribution) of these deposits is shown. The units on this map delineate textural changes in the subsurface as well as areally at the surface. An earlier map at 1:125,000 scale of central Connecticut (Stone and others, 1979) shows only surface textural units; a separate map in the same series (Langer, 1979) shows subsurface deposits of fine-grained materials. Several previous 1:24,000-scale quadrangle maps in Connecticut show threedimensional textural units and refer to them as "superposed deposits" (see Stone, 1976 and Radway and Schanbel, 1976, as examples). On this map, the term "stack unit" (Kempton, 1981) is used in place of superposed deposits.

DISTRIBUTION OF TEXTURES IN GLACIAL MELTWATER DEPOSITS

The distribution of textural units is extrapolated from both point data (well and test-hole logs, gravel pits, and shovel holes) and from interpretation of landforms based on the principles of morphosequence deposition and systematic northward ice retreat (Koteff, 1974; Koteff and Pessl, 1981). These concepts provide a model by which grain-size distribution can be predicted from the morphology of a deposit, given primary data about the textures at specific points. A morphosequence is a package of sediments deposited contemporaneously by meltwater flowing from the glacier margin to a specific base level. Within a morphosequence, grain size decreases and sorting improves from the icemarginal (proximal) end of a deposit downstream to the distal end. Landforms are ansitional within a sequence as well, ranging from ice-contact forms (eskers, kettles, kames) at the head (proximal end) of a deposit to uncollapsed forms (delta-foreset slopes, lake-bottom plains, valley trains) downstream (distal end). Coarser grained sediments are associated with the proximal parts of morphosequences, finer grained sediments are associated with distal parts; given this principle, textural distribution can be mapped using

point data that serve as controls. The relationship between textural variations and morphosequences is illustrated by cross section B-B' (fig. 2), which shows the distribution of texture units in the northern Quinnipiac River valley. This north-south section transects seven chronologically numbered morphosequences. Dashed lines drawn to the six southern sequences represent the probable generalized surface gradients of the heads of these deposits, prior to collapse (due to melting of buried ice) and subsequent stream entrenchment. From north to south within each of these sequences, the textures grade from coarse- to fine-grained sediments and the topography changes from collapsed to non-collapsed landforms. The longitudinal and vertical relationships illustrated by this section are common in other valleys as well. Stack units similar to those on cross section B-B' (fig. 2) occur throughout the stratified deposits of Connecticut. Many deposits having similar superposition of materials of differing texture were produced by geologic processes that occurred repeatedly in time and space during the deglaciation of Connecticut. For example, the sg/s/f and s/f stack units commonly occur in glacial-lake deltas. Morphosequences 1 through 6 on section B-B' are in fact a series of ice-marginal deltas. The sg/f stack unit commonly results from fluvial meltwater (or postglacial stream) terrace deposition on slightly older lake bottom deposits, as in sequence 7 on section B-B'. The f/sg and s/sg units commonly occur in the distal parts of morphosequences where the sand or fines overlap the collapsed, coarser, proximal parts of other (older) sequences. Examples of this are found in the distal parts of sequences 4 and 7. Many basic texture units (g, sg, s, f) likewise have broadly common origins. Units of gravel or sand and gravel often occur in the proximal parts of deposits, or were commonly laid down in glaciofluvial environments. Units of sand and fine-grained sediment are typically associated with distal parts of sequences and were usually laid down in lacustrine environments.

THICKNESS OF MATERIALS

The thickness of surficial materials in Connecticut varies considerably because of such

factors as the high relief of the bedrock surface, changing conditions of deposition during deglaciation, and various effects of postglacial erosion and removal of glacial sediments. The point data shown on the map are modified logs of wells and test holes (see fig. 5) that provide information about thicknesses. In thick till areas, most of the available point data are shown. Depths to bedrock given in the logs from till areas are shown on the map as the thickness of till, although in some places lenses of sand and gravel may be present within or at the base of till. Various log descriptions were interpreted as till; for example, the term "hardpan" was generally interpreted as till, but in some places, it may represent coarse, stony gravel. In glacial stratified deposits, the point data shown may have been selected from numerous logs to show representative thicknesses of materials both in single units and in individual textural components of stack units; in some areas the logs shown may be the only ones available. The point data are not uniformly distributed across the State. Some logs may describe a textural stacking that is more detailed than or in disagreement with, the map unit. Typical situations where this may occur are explained below and examples are located on the map view of the block diagram (fig. 3). In areas where coarser material overlies finer material, for example units sg/s and sg/f, the upper coarse material is commonly absent in places where later stream erosion has taken place (fig. 3, locality 1) or on steep frontal slopes of deltas (fig. 3, locality 2); the details of these areas are too small to show at the scale of this map. Point data from these places will indicate only sand or fines. Some point data indicate a thickness of sand and gravel or gravel at the base of the section, but this information is not reflected in the map unit (fig. 2 and fig. 3, locality 3). This situation arises because the distribution of coarse-grained material in the subsurface is more patchy and harder to map than subsurface fine-grained materials. Where the point data are adequate, units such as f/sg and s/sg are shown on the map; otherwise, scattered points indicate the presence of unmapped bodies of coarse-grained material in the subsurface. Some points located in areas shown as sand and gravel (sg) on the map indicate a more detailed textural stacking of small bodies of sand or fines within the coarser materials (fig. 3, locality 4). The block diagram (fig. 3) illustrates that the general location of the thickest stratified materials is in the middle of valleys (except where they have been removed by postglacial erosion along modern streams) and that these deposits thin toward the valley sides.

EXPLANATION OF MAP SYMBOLS

Point data—Thickness (in feet) and texture of surficial materials from logs of test holes and wells. Sources of logs are indexed in figure 5. Logs have been generalized by combining thin units, and translated into the letter symbols used for map units. For more detailed information, please see Description of Map Units on this sheet.

SURFICIAL MATERIALS MAP OF CONNECTICUT

described below show the texture of meltwater deposits through the total vertical section

to the extent that it is known or can be reasonably inferred. In some places only one

textural unit (such as unit sg) describes the entire vertical thickness of the meltwater

deposits; selected point data indicate the thickness in feet of the textural unit. In other

places stack units (such as units sg/s/f or s/f) indicate changes of textural units in the

subsurface; selected point data in these areas indicate the thickness in feet of each textural

unit in the section. Common depositional environments for each textural unit are given

in parentheses after each unit description.

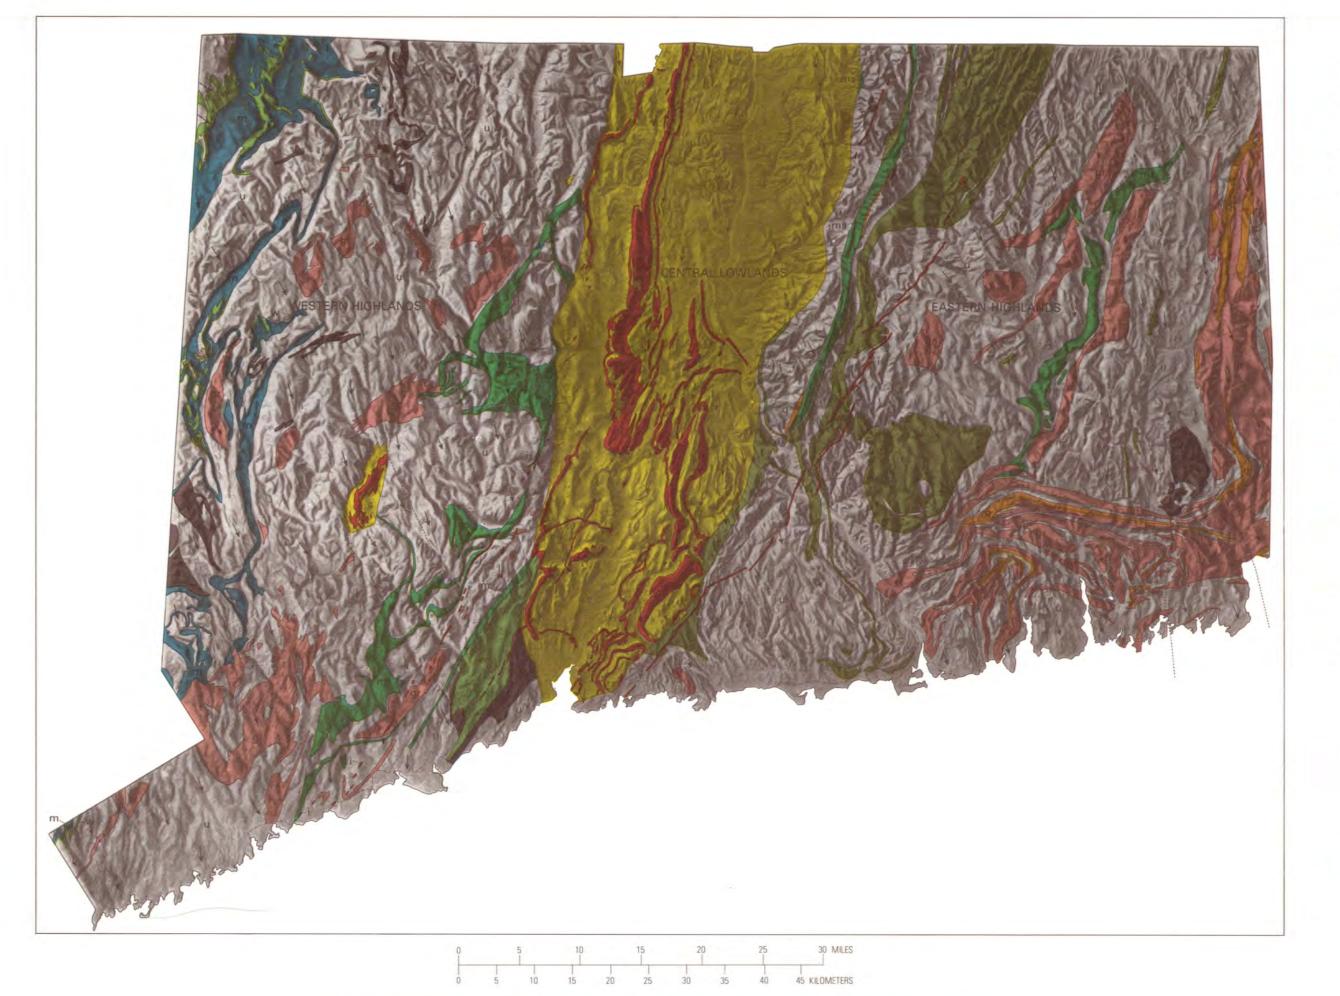

Figure 4.—Generalized bedrock lithologic map of Connecticut. The color and composition of glacial (surficial) materials is a result of the lithologic characteristics of subjacent and northerly adjacent rock types. Arrows indicate direction of glacial-ice movement across the State (see Discussion of Mineral Composition of Surficial Materials).

DISCUSSION OF MINERAL COMPOSITION OF SURFICIAL MATERIALS

mapped. The bar showing "map units along line of section" does not reflect all subsurface units. See text for further explanation.

The true dip of interbedded basalts and sedimentary rocks west of center on the section is 10°-20°.

Exaggeration of the vertical scale in relation to the horizontal scale causes slopes to appear steeper and deposits to appear thicker.

The character of the surficial materials of Connecticut is very much determined by the physical characteristics and mineral composition of the source rocks. This is conspicuously true of glacial deposits, and also of alluvium and stream-terrace deposits, which are largely derived from nearby glacial deposits. The relationship holds not only in areas directly underlain by specific rocks, but also "downstream" in the direction the glacier was moving. The directions of movement were south to southeast in most of Connecticut, but southwest to nearly west on the west side of the Connecticut Valley glacier lobe, as is shown by the arrows on the map. Abundant fragments of a particular rock generally occur no more than a few miles downstream from the source area, but scattered fragments, particularly of hard rocks, may occur tens of miles away. In the Glastonbury area of central Connecticut, till that is largely derived from Jurassic sedimentary rocks was deposited 0.2-1.0 mi downstream on metamorphic rocks (Langer, 1977). Fragments of distinctive rock types downstream from restricted source areas form indicator fans, two of which are shown in figure 4. The indicator fan in western Connecticut is derived from the sedimentary and igneous rocks of the Pomperaug Valley; the fan in southeastern Connecticut is derived from the Preston Gabbro. The following comments about the effects of specific rocks are based mostly on general impressions rather than detailed studies. These comments apply most strongly to glacial tills; the removal of fine particles from glacial and alluvial sands and gravels diminishes some of the contrasts in texture and color. The sedimentary rocks of central Connecticut produce surficial deposits that are commonly reddish brown; siltstones contribute considerable fine-grained material; and conglomerates contribute rounded pebbles and cobbles that have been broken out of matrix. Basalt and dolerite are relatively hard rocks; fragments are abundant near the sources, and occur mainly in the reddish-brown deposits derived from the adjacent sedimentary rocks.

Deposits derived from quartzites contain abundant quartz sand grains and quartzite fragments. Quartzites, because of their hardness, occur as very widespread erratic fragments. Marbles produce fine-grained, light-colored, highly calcareous glacial deposits. Dark schists and phyllites (Walloomsac and Wepawaug) produce fine-grained, darkcolored deposits. Abundant flakes of muscovite are very conspicuous in deposits derived from muscovite schists. The weathering of iron sulfides in sulfidic schists and gneisses produces very rusty or iron-cemented deposits. Granitic rocks that are low in dark minerals produce light-colored deposits, with abundant quartz and feldspar in the sand and coarse silt sizes. Dark mafic and ultramafic rocks produce dark-colored deposits that contain abundant dark iron minerals. The undivided light-gray to medium-gray schists and gneisses underlie more than half of Connecticut; they are the source rocks for the widespread sandy-silty tills of various shades of light and medium gray and yellowish gray. Associated sands and gravels are generally yellowish to light brownish gray. These common deposits show considerable range of composition, color and texture, but lack the distinctive lithologic effects produced by the other rock types mentioned above.

REFERENCES Langer, W.H., 1977, Surficial geologic map of the Glastonbury quadrangle, Hartford and Middlesex Counties, Connecticut: U. S. Geological Survey Geologic Quadrangle Rodgers, John, (compiler) 1985, Bedrock geological map of Connecticut: Hartford, Conn., Connecticut Geological and Natural History Survey.

EXPLANATION Most of the geologic contacts on this map and all the rock names and ages in the explanation are derived from the Bedrock Geological Map of Connecticut at 1:125,000 scale compiled by John Rodgers (1985). Generalization of lithology at the 1:500,000

scale of this figure means that areas mapped as one rock type generally include rocks of

other types, in bodies too small or too poorly known to show on the map. The lithologic

units emphasized here are not everywhere coextensive with the stratigraphic units of

Rodgers (1985) or of the more detailed studies on which his map is based. The shaded

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by U.S. Department of Transportation - Volpe Center were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Brad street. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

Copyright 2022 by Environmental Data Resources, LLC. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, LLC, or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, LLC or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1

RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the CT SHWS list, as provided by EDR, and dated 04/23/2010 has revealed that there is 1 CT SHWS site within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

CT CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CT CPCS list, as provided by EDR, and dated 02/17/2022 has revealed that there are 9 CT CPCS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Connecticut Site Information Management System (SIMS) is part of a

Direction Distance

EDR ID Number Elevation Site Database(s) **EPA ID Number**

GENE'S AUTO BODY REPAIR (Continued)

1000220203

suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut

EDR ID Number

Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Release Desc: In 1992 the Coast Guard acquired from the US Army 16 housing units in

> Milford & 16 housing units in Ansonia. All HF USTs in those areas were reported to have been removed by the US Army with the exception of three tanks (1 at Ansonia (#9) and 2 at Milford (#10 & #16). HRP Assoc. were retained to verify. Using ground penetrating radar, It was discovered that each of the16 units in Milford & the 16 units in Ansonia had a 500 gal. Abandoned HF UST. Each unit had a replacement AST. (In Ansonia all units with the exception of 9A had an abandoned

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

Direction Distance Elevation

on Site Database(s) EPA ID Number

ANSONIA COPPER & BRASS INC (Continued)

1000338814

EDR ID Number

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring. US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

Release Desc: gasoline, Commercial, continuous leaching of gasoline from soils at

the southern property line

Running Comments: Spills Files, UST Enforcement Files, Cleanup Fund Files, and LUST

Files

Work Performed: Feb 2008: Soil borings advancedJune 2008 Prior to soil excavation:

Four soil samples were collected from the diesel UST grave and were analyzed for VOCs (EPA 8260), lead (total and SPLP), ETPH, and SVOCs (EPA 8270). 7 soil samples from the former lines and dispenser region were also analyzed for the same COCs. The 8 soil samples collected from the gasoline UST graves were analyzed for VOCs and lead. Samples from the UST graves were above the I/C DEC, but below 30 x the DEC. Samples from the dispensers and lines were below the I/C DECs.

Release Desc: gasoline, Commercial, continuous leaching of gasoline from soils at

the southern property line

Running Comments: Spills Files, UST Enforcement Files, Cleanup Fund Files, and LUST

Work Performed: Feb 2008: Soil borings advancedJune 2008 Prior to soil excavation:

> Four soil samples were collected from the diesel UST grave and were analyzed for VOCs (EPA 8260), lead (total and SPLP), ETPH, and SVOCs (EPA 8270). 7 soil samples from the former lines and dispenser region were also analyzed for the same COCs. The 8 soil samples collected from the gasoline UST graves were analyzed for VOCs and lead. Samples from the UST graves were above the I/C DEC, but below 30 x the DEC. Samples from the dispensers and lines were below the I/C DECs.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate
less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST HANDLING INSTR), Non-hazardous waste description (NON HAZ WASTE DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

SEH: List of Significant Environmental Hazards Report to DEEP

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

TARGET PROPERTY ADDRESS

KINNEYTOWN DAM 677 SOUTH MAIN STREET SEYMOUR, CT 06483

TARGET PROPERTY COORDINATES

Latitude (North): 41.368564 - 41² 22' 6.83" Longitude (West): 73.085254 - 73⁵ 5' 6.91"

Universal Tranverse Mercator: Zone 18 UTM X (Meters): 660140.9 UTM Y (Meters): 4581229.0

Elevation: 33 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 11730099 ANSONIA, CT

Version Date: 2018

North Map: 11730123 NAUGATUCK, CT

Version Date: 2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

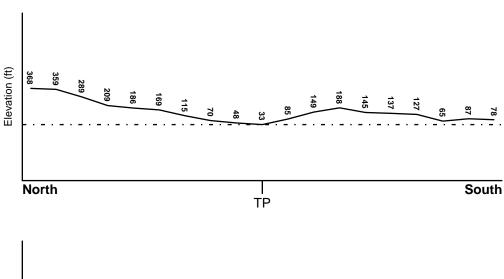

TOPOGRAPHIC INFORMATION

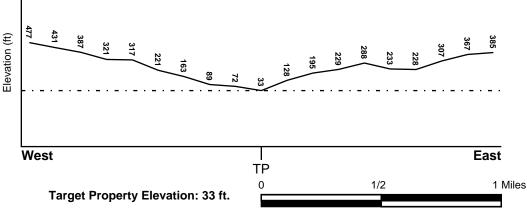

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

ANSONIA YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1/2 - 1 Mile SW
Site Name: ELECTROLUX
Site EPA ID Number: CTD982198970

Groundwater Flow Direction: East

Measured Depth to Water: not available.

Hydraulic Connection: Detailed hydraulic connection information is not available. A thin

veneer of glacial till and stratified drift overlies the bedrock at the site. The saturated thickness of the overburden is less than 10

feet.

Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Water

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class: Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Telephone: 860-509-7333

Active, emergency and inactive wells used for potable purposes that are owned and operated by active community and non-community water systems in Connecticut.

OTHER STATE DATABASE INFORMATION

Connecticut Leachate and Wastewater Discharge Sites

Source: Department of Environmental Protection

Telephone:

The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EPA-Approved Sole Source Aquifers in Connecticut

Source: EPA Telephone:

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

DESCRIBE SITE ASSESSMENT ACTIVITIES BEING REQUESTED AND ESTIMATED COSTS: Estimated cost of assessment activities, \$350,000-\$450,000

Activities to be conducted: Sediment Collection - To the extent possible, it is important to try to sample sediment from the full vertical extent of the impounded sediment deposit and focus on collecting samples from the finer-grained material, where contaminants are more likely to bind. For the Kinneytown impoundment, we anticipate that barge-mounted mechanical borings or tripod-mounted mechanical hammer augers will need to be deployed to gather at least 20-25 sediment sample cores to refusal, noting the character of refusal, throughout the impoundment with at minimum another 2 samples collected downstream and 2 samples upstream with hand augers or a clear plastic Shelby tube, depending on the character of the sediment. The exact number of samples required for collection will be determined in discussions with CT DEEP once an initial Sediment Sampling Plan has been prepared for their approval. It is important to log the probes/borings to describe the character of the sediment encountered and the character of the underlying material (i.e. original riverbed of floodplain material; refusal). Sediment samples are collected during the sediment probing or boring work. Samples will need to be sent to a CT-certified laboratory for total organic carbon, grain size distribution, metals, polycyclic aromatic hydrocarbons (PAHs), pesticides, and polychlorinated biphenyls (PCBs). Physical sediment parameters, to a ssess the physical characteristics of the impounded sediment and interpret sediment contamination, will include composite grain size distribution, organic content, and moisture content. A similar sampling method should be considered for Coe Pond/downstream impoundments.

Sediment Quality - CT DEEP guidance states impounded sediment should be tested for total solids, metals, total cyanide, grain size,
pesticides, total PCBs, semivolatile organic compounds (PAHs), and compared a gainst (i) freshwater and (ii) Residential Direct
Exposure Criteria (DEC) and the NOAA Sediment Probable and Threshold Effect Concentration (PEC & TEC) SQuiRTs Criteria for
Freshwater or Marine environments. These consensus-based sediment quality guidelines have been developed to synthesize previously
$published \ toxicity \ studies \ and \ have \ been \ shown \ to \ be \ both \ accurate \ predictors \ of \ sediment \ toxicity \ and \ negative \ predictors \ for \ toxicity$
$to \ benthic \ invertebrates \ by \ direct \ contact. \ These \ NOAA \ guidelines \ have been \ established \ in \ two-tiers: \ Threshold \ Effect \ Concentration$
or Level (TEC or TEL) and Probable Effect Concentration or Level (PEC or PEL). TEC/TEL is the concentration below which
harmful effects are unlikely to be observed; PEC/TEL is the concentration above which harmful effects are likely to be observed.
These guidelines do not consider the potential for bioaccumulation and are not intended to serve as site-specific clean-up levels.
Instead, they are applied to facilitate the decision-making process regarding sediment management; an absence of exceedances
generally serves as a defensible basis for no further investigation. State residential exposure criteria are typically based on daily
contact for multiple years, and thus serve as a conservative threshold for human health risk if the impounded sediment is exposed post
dam removal. Laboratory results and sediment quality guidelines will be summarized and interpreted.
Sediment Quantity - Total sediment quantity is typically estimated based on the sediment probing or mechanical boring results, that
determine the depth of the impounded sediment deposit. The sediment depths and volumes can be further confirmed and refined by
comparing the results to additional ground penetrating radar employed throughout the impoundment.
Sediment Management Plan - A Sediment Management Plan will be needed to describe the analysis of the sediment quality, total
impounded sediment quantity, potential mobility post dam removal, physical characteristics, and potential sediment management
options. The Sediment Management Plan will be incorporated into the Design Plans and the Engineering Design Memorandum.
Hazardous Building Materials Analysis - There are four buildings on site that will require a batement/remediation prior to their
demolition. Unit 1 Gatehouse, Unit 1 Powerhouse, Unit 2 Powerhouse, and Canalgate
QAPP should include sediments, groundwater, soil, and hbma when submitted to EPA prior to sampling, a complete monitoring plan,
sediment sampling plan for both impoundements, sediment probes at both impoundments, mechencial borings and sediment sample
collections at both impoundements, upstream and downstream sediment sampling at both impoundments, sediment lab analysis both
chemcial and physical comparison to criteria, sediment transport/mobility analysis to Coe Pond, sediment management plan (with
cost), Ha zardous building materials analysis on all four structures on site, phase II groundwater and soil collection within the vicinity
of the four buildings, phase I report, and a complete remediation action plan with cost estimates.
or the roal candings, place report, and a complete remediation plan with cost communes.
ANTICIPATED FUTURE USE: ☐ Residential ☐ Recreational ☐ Commercial/Retail ☐ Industrial
DESCRIBE APPLICANT'S PROPOSED REUSE PLAN : Decommissioning of the Kinneytown Dam will directly benefit the
underserved communities all along the Naugatuck River from Derby all the way up to Waterbury impacting 72 distressed
communities. According to the Justice 40 census track data, census track #62353 in Ansonia is an EJ Community that directly lies
within the dam's borders. Removing the damand it's structures will eliminate the serious public sa fety hazards caused by the blighted
properties (x4 buildings) decreasing the level of crimes that are committed within the area. Fish currenlty being restricted by the
Kinneytown Dam would gain access to 40.5 miles of river and 311 miles of tributaries. The removal of the dam would allow the river

to return to its original state as a narrow fast flowing river capable of increasing the species of fish such as Blueback Herring, Sea Lamprey, Atlantic Salmon, Alewife, American Shad, etc. (All critically shocked species within this ecosystem). It would also restore the natural sediment transport in the Naugatuck River helping replenish coastal marshes and providing a dditional protection from coa stal flooding downstream. Habitat restoration and native species would also benefit from the removal of the dam. The project will build resilience against extreme weather and help communities adapt to climate change by reducing flood risk. Dam removal will reduce the level of the 100- and 500-year flood plains a bove the dam, giving the Naugatuck River more access to flood plains, wetlands, side channels and marshes which will help attenuate flood risks to communities while helping enhance fish and wildlife habitat. With water levels being lowered within the dam impoundment area, the area will be turned into green recreational space allowing an access point to the greenway trail to be connected with the neighboring trail system. Allowing the local community to once again participate in the benfits of the river whether through trail or fishing activities. Once completed, the green way trail will connects Derby to Torrington. Eligible sediments located behind the dam will be transported to an impondment downstream "Coe Pond/Unit 2" where the sediments will be used as fill for the pond and permanently-capped. Coe Pond will be the focus of an a Iternative energy study as part of this project that will investigate how the existing electric grid interconnect at the site can be used to replace the lost renewable energy production resulting from the elimination of the hydroelectric facility. This would help reach regional and state carbon reduction goals and help reduce future climate change impacts. The site is being proposed for solar-panels allowing the area to serve as a private grid for the neighboring communities.

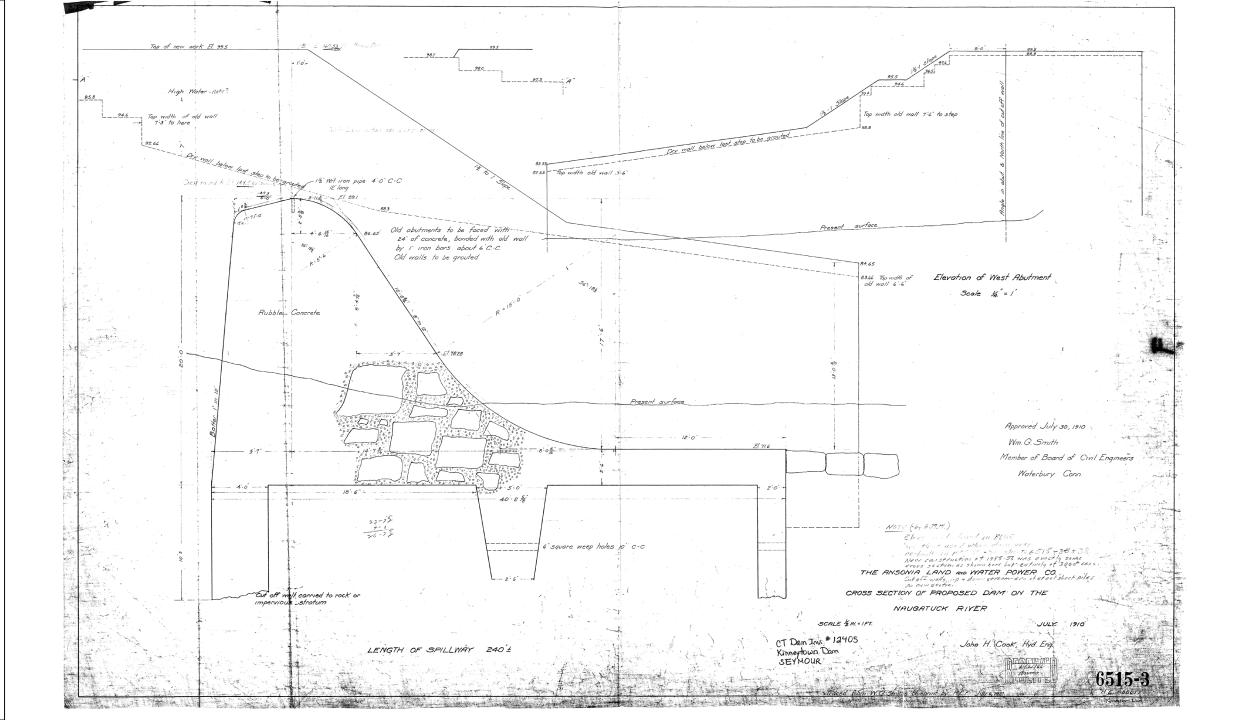

DESCRIBE ANY FINANCIAL INCENTIVES PLANNED BY APPLICANT TO SPUR DEVELOPMENT (tax incentives, etc.): The town of Seymour and Ansonia will be canceling any liens and/or taxes owed on the site. This area will once again be opened to the local communities allowing them access to the river and creating economic development opportunites for resturants as well as other commercial space. The town of Seymour and Ansonia have tax incentives that may be available for new commercial space.

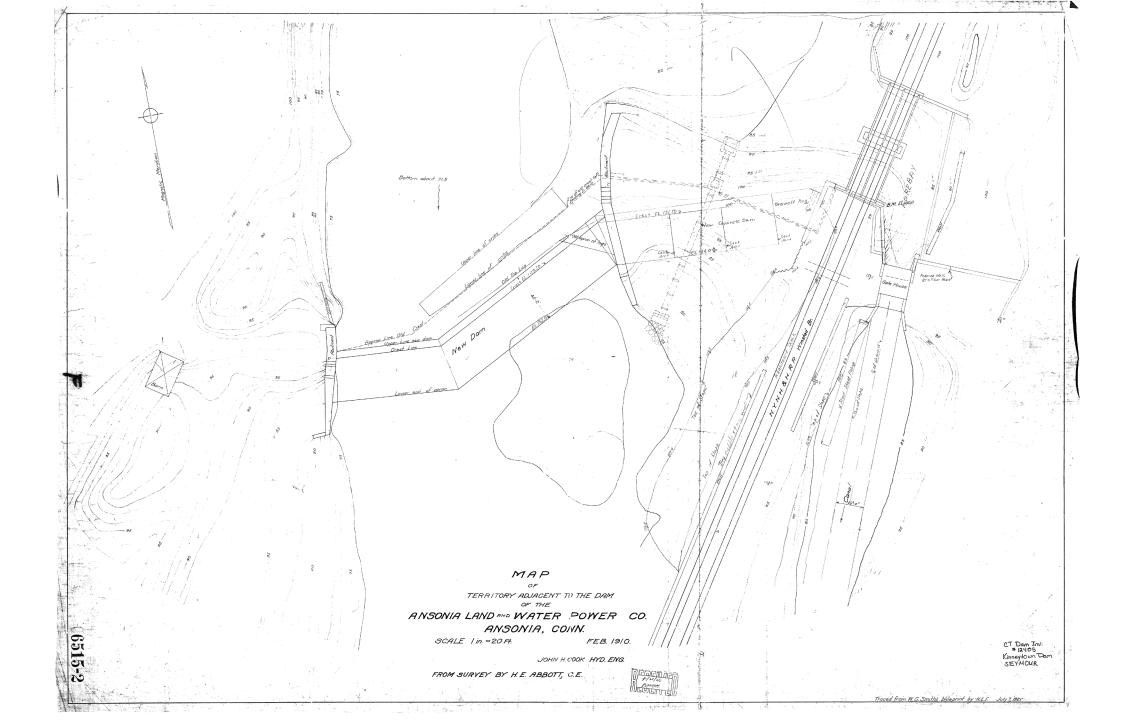

DESCRIBE PROPOSED FUNDING SOURCES AND AMOUNTS FOR SITE CLEANUP (EPA program is for site assessment only, no cleanup money is being offered as part of this program): The Targeted Brownfield Assessment will be providing a better determination of estimated cost. However, the Na ugatuck Councils of Governments will be reaching out to the Connecticut Department of Energy and Environmental Protection, Connecticut Department of Economic Community Development, as well as the U.S. Environmental Protection Agency to contribute towards the cleanup cost. Remedition and soil transport from Kinneytown Dam to Coe Pond as well as the capping of the Pond is anticipated to be within the vicinity of \$10 million.

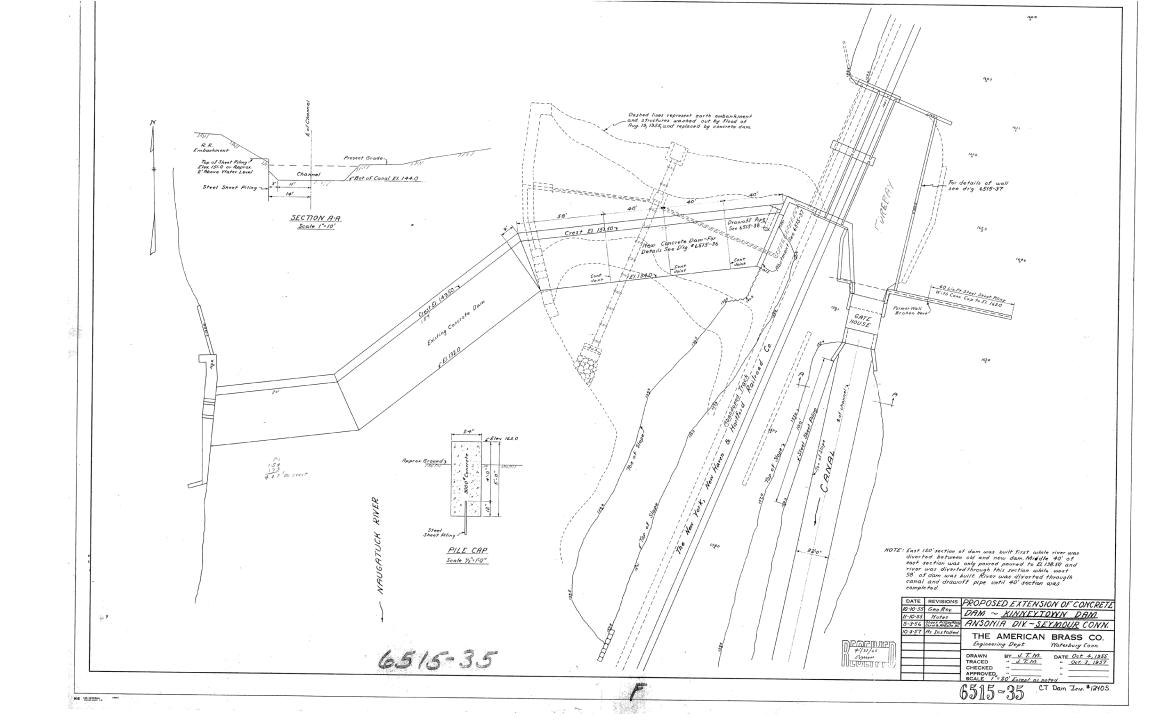

BRIEFLY DESCRIBE ANY PUBLIC INTEREST AND/OR **COMMUNITY INVOLVEMENT** IN SITE REUSE PLANNING ACTIVITIES TO DATE: Consistent with NVCOG's Public Outreach Policy, this project will maintain the same level of priority as any other major project or documentation. The outreach strategy will include multiple formats of outreach and place an emphasis on digital engagement. This will include noticing the public through means of legal notice, calendar, mailing list, newsletter, press release(s), social media, and via the NVCOG Web Page. A minimum of three hybrid public information meetings will be held during critical stages of the project to provide updates and educate the public. NVCOG in collaboration with its partners will develop uniform templates for PowerPoint presentations, flyers, handouts, etc. on the topic and the project to provide to environmental stakeholders such as the Waterbury River Briga de, local nature centers, Conservation Commissions, and land trusts. The outreach strategy will include providing on-demand digital education. The first component of digital education will involve promoting the Naugatuck River Restoration Coalition's interactive story map. The map is routinely updated with content detailing the efforts to restore migratory fish to the Naugatuck River and current issues at the Kinneytown Dam keeping fish from miles of restored habitat upstream. The map can currently be a ccessed via the NVCOG website on the Kinneytown Dam webpage. The second component of digital education will involve a documentary film that'll highlight the history, fisheries, collaborative process, analysis, barrier removal, restoration, and

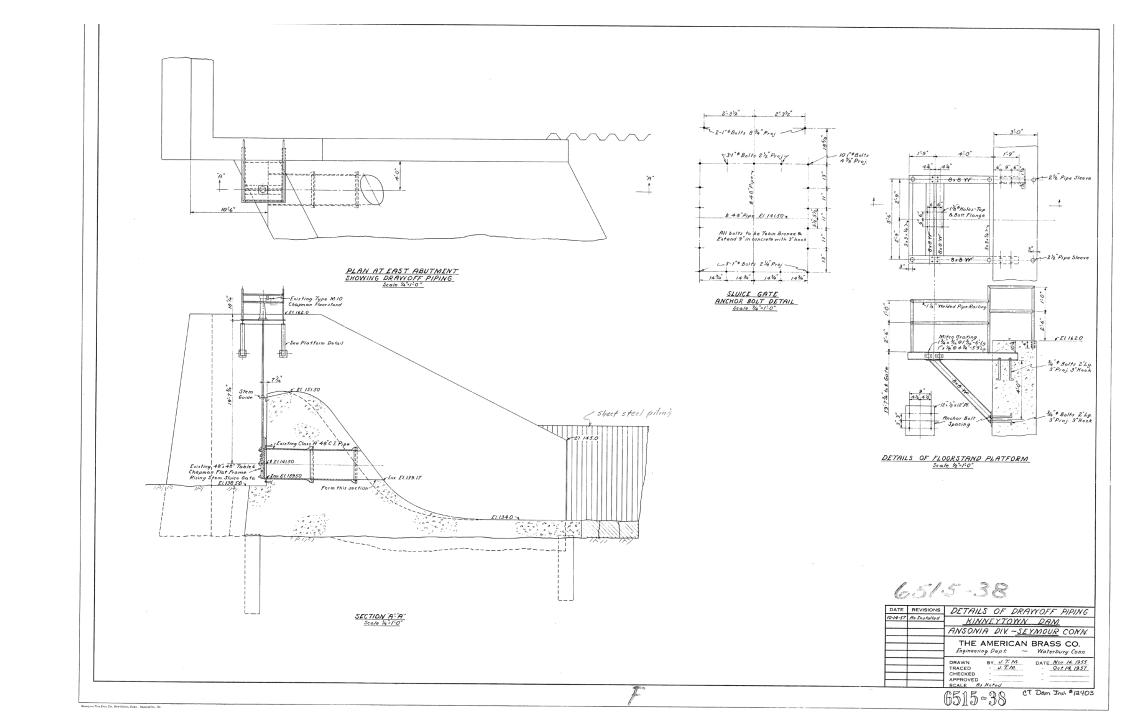

monitoring of this project and the Naugatuck River. It is our goal to be inclusive when conducting outreach to inform and educate the community. An effective Diversity Equity and Inclusion (DEI) measure is to meet people where they are. NVCOG participates in a minimum of four annual local events and/or farmers markets hosted throughout the 19 municipalities located in the planning region. These opportunities, in a ddition to NVCOG's a nnual Household Hazardous Waste Collection and Composter Sale events, can be used to further educate the public on barrier removal and fish passage. In addition to hosting press visits we plan to host River clean-up events to encourage support for restoration and environmental stewardship.
As a result of the Small Business Liability and Brownfields Revitalization Act (Public Law 107-118, 01/11/2002), certain changes
were made in the Brownfields program. Petroleum, controlled substances and mine scarred land are now eligible for funding.
Additionally, certain sites are no longer eligible for funding and other sites may be eligible for funding a fter EPA makes a "Property Specific Determination for Funding". The following questions need to be answered as part of the evaluation process.
SITES NOT ELIGIBLE FOR FUNDING:
1. Facilities listed (or proposed for listing) on the National Priorities List.
2. Facilities subject to U.S. EPA unilateral administrative orders, court orders, administrative orders on consent, or judicial consent decrees issued to or entered into by parties under CERCLA.
3. Facilities that are subject to the jurisdiction, custody or control of the United States Government.
SITES NOT ELIGIBLE FOR FUNDING WITHOUT A PROPERTY SPECIFIC DETERMINATION:
Please answer the following questions to the best of your knowledge:
1. Is your site/facility subject to an ongoing U.S. EPA CERCLA removal action? ☐ YES ☒ NO
2. Is your site/facility subject to an unilateral administrative order, court order, administrative order on consent or judicial consent decree or to which a permit has been issued by the United States or an authorized state under the Solid Waste Disposal Act (as a mended by the Resource Conservation and Recovery Act (RCRA)), the Federal Water Pollution Control Act (FWPCA), the Toxic Substances Control Act (TSCA), or the Safe Drinking Water Act (SWDA)? ☐ YES ☒ NO
3. Is your site/facility subject to U.S. EPA corrective action orders under RCRA (sections 3004(u) or 3008(h)) and to which a corrective action permit or order has been issued or modified to require the implementation of corrective measures? ☐ YES ☒ NO
4. Is your site/facility a land disposal unit that has filed a closure notification under subtitle C of RCRA and to which closure requirements have been specified in a closure plan or permit? ☐ YES ☒ NO
5. Has your site/facility had a release of polychlorinated biphenyls (PCBs) that is subject to remediation under TSCA? ☐ YES ☒ NO
6. Has your site/facility received funding for remediation from the Leaking Underground Storage Tank (LUST) Trust Fund? ☐ YES ☒ NO
Note: If you have answered Yes to any of these questions, you will need to prepare a "property specific determination". Plea se contact Alan Peterson at the email address or phone number below for further information. PETROLEUM ONLY SITES:
Please answer the following questions to the best of your knowledge:
1. Please perform a title search and list all of the former owners of the site:

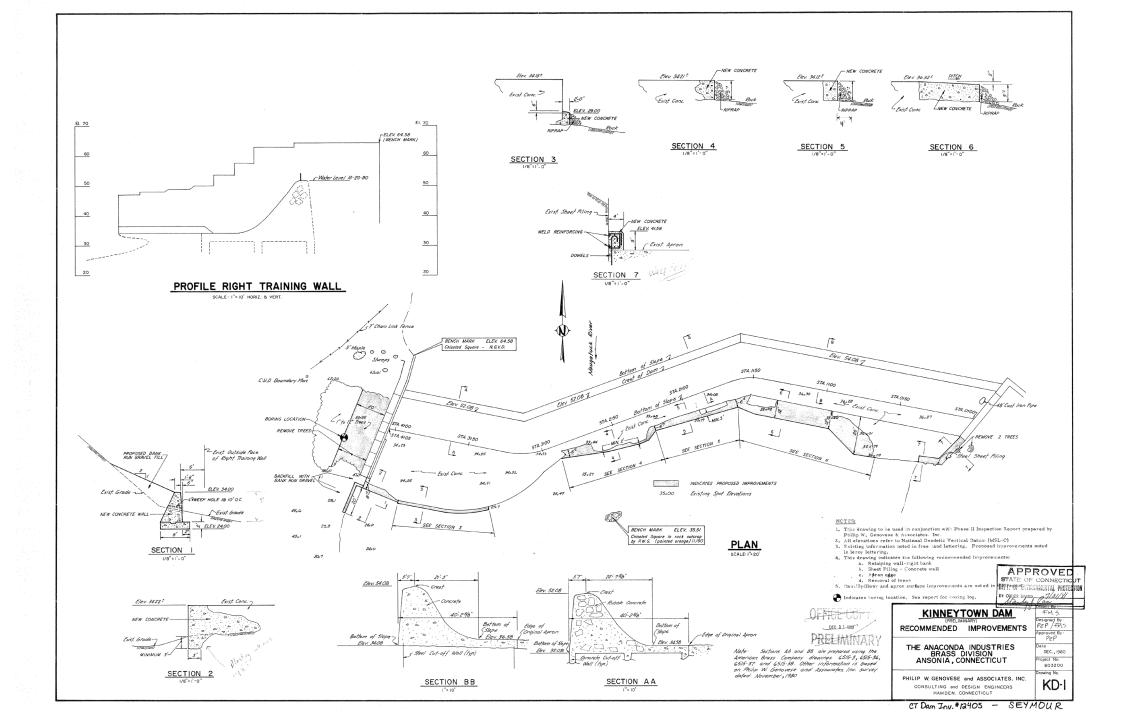

2.	Did any of the former owners cause/contribute to the contamination at the site? ☐ YES ☐ NO Please List:
3.	Are any of the former owners financially able to conduct the site assessment? ☐ YES ☐ NO
SUBM	IT COMPLETED FORMS TO:

NOTES

- 1 CT-RCS: Residential Direct Exposure Criteria for Soil Criteria per Revised Remediation Standard Regulations Effective March 9, 2021.
- 2 NOAA-FPEC: NOAA Freshwater Sediment Probable Effect Concentration (PEC) SQuiRTs Criteria per 2008 Screening Quick Reference Tables.
- 3 NOAA-FTEC: NOAA Freshwater Sediment Threshold Effect Concentration (TEC) SQuiRTs Criteria per 2008 Screening Quick Reference Tables. or REG-3: USEPA Region 3 BTAG Freshwater Sediment Screening Benchmarks Table - July 2006

Dara Qulaifiers: U = ND, Compound was analyzed but not detected; J = Estimated; I = Interference; P = RPD exceeds method criteria

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

- F The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- C Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- Q The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results.

Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

- V The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- I The lower value for the two columns has been reported due to obvious interference.
- G The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- A Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- E Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- RE Analytical results are from sample re-extraction.
- R Analytical results are from sample re-analysis.
- D Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- P The RPD between the results for the two columns exceeds the method-specified criteria.
- II Not detected at the reported detection limit for the sample
- M Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- S Analytical results are from modified screening analysis.
- B The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

Subject: RE: Kinneytown Dam - Phase 1 Environmental Site Assessment

Date: Thursday, January 26, 2023 11:52:46 AM

CAUTION: This email originated from outside of the Department of Transportation (DOT). Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Good Morning Evan, I am unaware of any spills or releases at those locations. I have no paperwork for those addresses so more than likely there were never any incidents there. I hope this helps. Please do not hesitate to call If you have any further questions.

Respectfully,

FM Willis 203 881-5010

From: Starr, Evan (Volpe) < Evan. Starr@dot.gov> Sent: Thursday, January 26, 2023 10:55 AM

Subject: EXTERNAL Kinneytown Dam - Phase 1 Environmental Site Assessment

Good morning,

The U.S. Department of Transportation Volpe Center and U.S. Environmental Protection Agency are conducting a Phase I Environmental Site Assessment for the Kinneytown Dam in Seymour, CT. The site has two addresses listed in Seymour and one in Ansonia: 677 South Main Street and 769 Derby Avenue, Seymour;

and 0 Hotchkiss Terrace, Ansonia. The property is currently owned by Kinneytown Hydro Company Inc.

As part of the site assessment, we are contacting local officials that may have information regarding any recognized environmental conditions that may exist at the subject property. Please see questions below:

- 1. Are you aware of any spills or releases of petroleum or hazardous substances at the Subject Property?
- 2. Are you aware of any fuel storage tanks that are currently located at, or have previously been removed from, the Subject Property?
- 3. Are there any other environmental concerns or information you have to share associated with the Subject Property?

Thank you for your time. If there's anyone else you recommend I speak with just let me know. Please feel free to call if you have any questions.

-Evan

Subject: [EXTERNAL] Kinneytown Dam - Phase 1 Environmental Site Assessment

Good afternoon,

The U.S. Department of Transportation Volpe Center and U.S. Environmental Protection Agency are conducting a Phase I Environmental Site Assessment for the Kinneytown Dam in Seymour, CT. The site has two addresses listed in Seymour and one in Ansonia: 677 South Main Street and 769 Derby Avenue, Seymour;

and 0 Hotchkiss Terrace, Ansonia. The property is currently owned by Kinneytown Hydro Company Inc.

As part of the site assessment, we are contacting local officials that may have information regarding any recognized environmental conditions that may exist at the subject property. Please see questions below:

1. Are you aware of any health or environmental concerns associated with the Subject Property?

Thank you for your time. Please feel free reach out with any questions. -Evan
